

DUMP ALONG PARIS-WINDHAM RD.

SITE DESCRIPTION

This AOC is an area adjacent to Sand Creek that was used as an open dump for miscellaneous materials including transite siding, lab bottles and drums. The site is 400 x 20 x ~3 ft deep. The dates of operation for the dump are unknown, but aerial photos show the site in the 1950s.

The surface soil and sediment pathway are considered complete. Three surface soil samples and one sediment sample were collected and analyzed for SVOCs, explosives and metals. Soil samples were taken by USACE in September 2001 to further refine the RRSE. The most significant contaminants were organics including benzo(a)anthracene (3.45 ppm), benzo(a)pyrene (3.38 ppm), benzo(b)fluoranthene (4.65 ppm), chrysene (2.91 ppm) and Indeno(1,2,3-cd)pyrene (2 ppm). The high RRSE rating was confirmed by this sampling event.

A soil and debris removal action was completed in fall 2003.
