1.0 EXECUTIVE SUMMARY

New World Technology (NWT) was contracted by the U.S. Army Field Support Command (AFSC) to perform remediation of small areas of elevated activity by packaging and disposing of soil contaminated with monazite sand, and performing a Radiological Final Status Survey at the former west tank farm area of the Ravenna Army Ammunition Plant (RVAAP), Ravenna, Ohio. The work was performed in July and August of 2004. The sand had been stored as a part of the strategic stockpile plan under the Defense Logistic Agency (DLA), formerly known as the General Services Administration (GSA). The monazite sand was removed in the mid 1970's and the license for possession (from the Atomic Energy Commission) was terminated at that time. The results of the final status survey and sampling effort indicate that the area meets the release criteria (4.0 pCi/g of Th^{232}) for unrestricted use.

2.0 PROJECT SCOPE/PURPOSE

The purpose of the project is to obtain release for unrestricted use(from radiological constituents only) the affected area of the former West Tank Farm area located at RVAAP. This final report describes the remediation, and the final status surveys and sampling that was performed.

3.0 BACKGROUND INFORMATION

The Ravenna Army Ammunition Plant (RVAAP) is located in northeastern Ohio spanning areas of both Trumbull and Portage counties. The facility was a Department of Defense (DOD) facility for the loading, assembling, packing, and storage of ammunition and explosives. The plant began operations in 1940 and ended during the 1970s. Portions of the installation are being re-utilized by the Ohio National Guard as a training facility.

The General Services Administration (GSA) used a portion of the facility for storage of strategic materials. Among the materials stored at the facility were monazite sand (thorium ore) totaling approximately 3 million pounds. The sand contains measurable quantities of natural thorium (Th-nat). The Atomic Energy Commission license was terminated in the mid 1970s following shipment of the materials out of the country.

The monazite storage area is in a remote section of RVAAP. There are no physical barriers (i.e. fencing) protecting the area from potential access. The AOC presents no immediate hazard to facility personnel or the environment due to the fact that the areas of contamination are small in size and low in activity levels.

The monazite AOC consists of an approximately 4,400 m^2 area between and along two former railroad lines in the west tank farm area of the RVAAP. The General Services Administration (GSA) owned Monazite ore and leased two tanks from RVAAP to store the ore from the late 1950's to 1974. The two storage tanks (tanks 1303 and 1305) were used to store approximately 3,023,553 pounds of monazite ore. The ore contained less than 10-percent natural Thorium. The data on the license application indicates 170,000-pounds of Thorium or approximately 6-percent of the total weight.

The ore was removed and shipped to Holland under an AEC licensed action under export license STE-8179. The historical documentation of this transaction consists of an AEC license application and a few letters from GSA. It is unclear if the license number STE-8179 is an AEC number. GSA's policy of destroying records seven years after transactions has limited the available records.

Monazite ore was stored only at RVAAP. Monazite is a very insoluble and stable crystal structure and does not degrade in typical environmental conditions. Thorium is not very mobile in the environment and is normally only distributed by physical means.

GSA contracted with Health Physics Associates Ltd. to decontaminate the tanks and surrounding area in May 1975. The tanks were declared excess in January 1976 and demolished some time later. During the survey of the decontaminated tanks, contamination of the soil was found east of tank 1303. The top few inches of soil were to be removed, and drummed for disposal. A letter from GSA to the Commander of RVAAP, dated 7 January 1976, states that this was completed and the drummed material was shipped to the Maxey Flats burial site in Kentucky.

The Ohio Department of Health requested that, as part of the radiological survey of other areas of RVAAP, that the U.S. Army Corps of Engineers (USACOE) scan the former monazite storage area. This was done as part of a scoping survey in April 1998. During this survey it was determined that exposure levels in excess of 40 times background were present in several areas and the exposure rate across the area was greater than background for the RVAAP. The surface scan conducted by Health Physics Associates in 1975 identified elevated exposure readings in some of the same areas as found in this survey. The scoping survey performed by the USACOE (No. CESWT-SO-R2-05-98) formed the basis for the planned activities covered under NWT's original remediation effort.

Several decontamination and survey efforts were conducted from the mid 1970s to 2001, with the most recent being a remediation effort and Final Status Survey performed by NWT in July/August of 2004.

NWT was contracted by the U.S. Army, Industrial Operations Munitions Command (presently Army Field Support Command) to remove and dispose of soil contaminated with monazite sand in December of 1999.

The contract work plan required removal and disposal of approximately 245 cubic yards of materials followed by a final status survey to provide data for unrestricted (radiological constituents only) reuse of the area. During the removal effort it was discovered that a significant amount of monazite sand remained and that the site could not be released for unrestricted use until further remediation was performed.

New World Technology (NWT) was then contracted by the U.S. Army, Operations Support Command (OSC) to perform a characterization survey and sampling effort to determine the quantity of material that remained on site that required disposal. This survey was performed in May of 2000.

It was determined that an additional 1,150 cubic yards of contaminated soil required removal to a depth not to exceed one-foot.

NWT mobilized on site in late April of 2001 to remediate the additional 1,150 cubic yards of contaminated soil. During the loading of the 1,150 cubic yards of contaminated soil NWT discovered on or about 8 May 2001 that contamination was present in depths beyond one-foot below grade (down to approximately three-feet below grade) in various areas of the site not previously identified as having depth contamination. The majority of the drainage trench along the east side of the site previously identified as having surface contamination is excavated to a depth of approximately three-feet below grade. Some of the areas (excluding the drainage trench) excavated to that depth had the remains of the roots of vegetation (most likely trees ~ 6" or more in diameter) previously growing on the site that seemed to have drawn the monazite sand into the clay layer of the soil.

NWT discovered approximately 10 areas of the site having depth contamination to approximately three-feet below grade. Approximately one-foot diameter dark (grayish, black) circles were discovered in the clay layer of the soil. It is speculated that these circles were footprints of cardboard drums that may have been buried at the site but there was no indication of rust or metal that would be expected from a decayed metal drum. The soils around these areas were contaminated, with the most elevated radiation levels being the circles themselves. All of the areas discovered were remediated to below the DCGL and the soil was placed into the contaminated soil stockpile.

A total of 24 subsurface soil samples were collected from the locations where removal efforts were required to a depth of ~ 3 foot below grade. Subsurface (~ 3 foot below grade) samples were collected from each sampling location. All of the sample results were below the DCGL of 4.0 pCi/g. Figure 1 presents the locations of the subsurface soil samples and Table 1 presents a summary of the results.

G-8-D	0.82	0.27

The contaminated soil stockpile was covered with plastic sheeting and had a silt screen installed to prevent erosion.

Based on the size of the contaminated soil stockpile the estimated remaining volume of contaminated soils was approximately 790 cubic yards.

NWT then removed the 790 cubic yards of contaminated soil (Phase 3-1) in September of 2001 and performed a Final Status Survey.

Based upon soil sample results (received after site demobilization) and gamma scan surveys, it was revealed that there were small elevated areas of activity remaining on the site that would require remediation.

NWT mobilized on site on to perform remediation of the elevated areas of activity on July 28th of 2003.

An additional 45 cubic feet of contaminated soil was removed during that effort. Post remediation surveys and soil sampling were performed following the removal effort. The results of the post removal

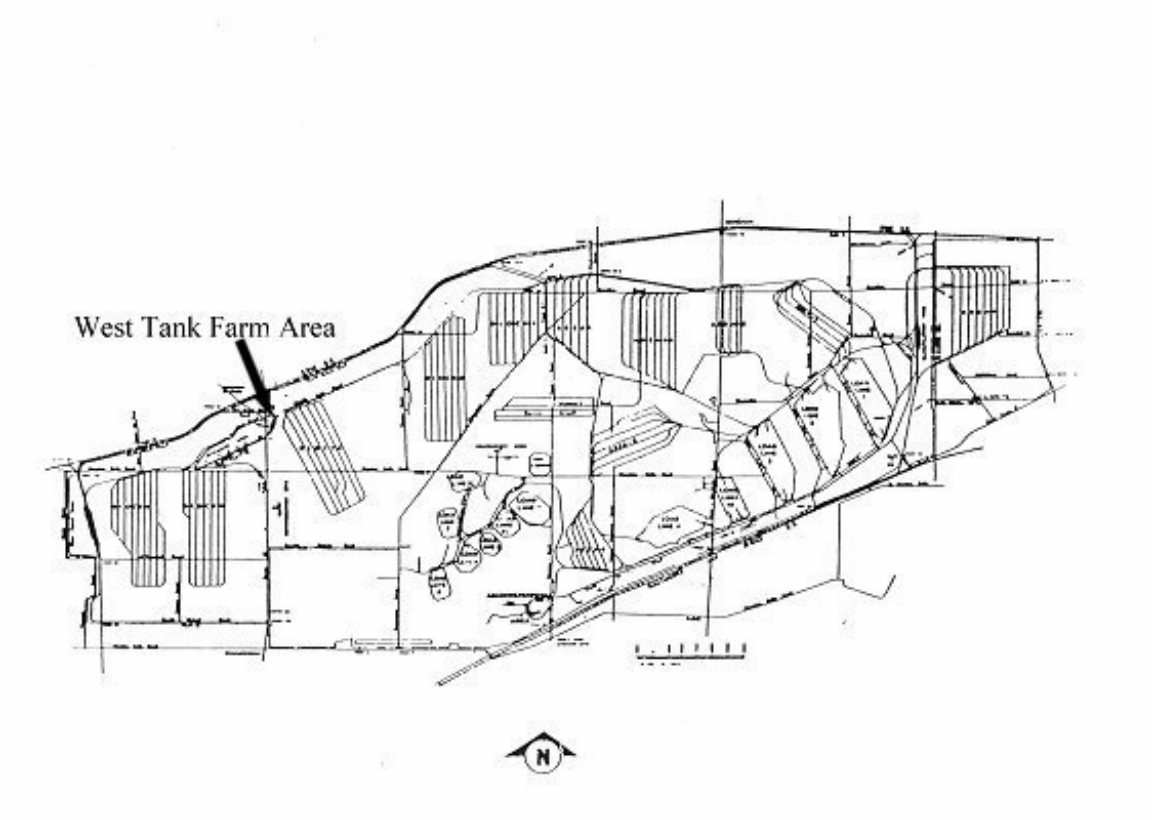

soil samples indicated all areas were remediated to below the $DCGL_W$ with the exception of one area (~ 1 m^2 in size) which was 9.3 pCi/g.

NWT mobilized on site on July 26th of 2004 to perform a 100 % gamma scan survey, remediate areas of elevated activity found during the gamma scan survey, package and dispose of the contaminated soils, and perform a Radiological Final Status Survey at the former west tank farm area. The work was completed on August 13, 2004. The work was performed under oversight of a representative of the Nuclear Regulatory Commission Region III office.

3.1 SITE INFORMATION

The west tank farm is located on the property of the Ravenna Army Ammunition Plant located in Ravenna, Ohio. Figure 2 shows the location of the West Tank Farm at RVAAP.

Figure 2 West Tank Farm Location Map

3.2 SITE CONDITIONS

NWT has removed approximately 2,100 cubic yards of soil. During previous removals, approximately one-foot of contaminated soil was removed from the main area of the site between the abandoned railroad track bed along the eastern perimeter of the AOC and the former location of storage tanks along the western perimeter of the AOC. Approximately three feet of contaminated soil was removed at various locations in the drainage ditch that is located along the eastern perimeter of the AOC.

3.3 ALARA CONSIDERATIONS

Dose rates, and the total amount of radioactive materials at the site, indicated that direct exposure to radiation was of minor consequence during work activities. Measurements of radiation exposure show maximum dose rates were below 20 uR/hr at 1 meter from the ground surfaces. Personnel exposures were not anticipated to exceed 5 millirem TEDE.

The principle method of exposure would be the inhalation of radioactive materials. The potential for inhalation was considered to be minimal based on the amounts of radioactive materials present and the methods used for the removal of the contaminated soils.

4.0 SITE PREPARATION

4.1 RADIATION WORK PERMIT (RWP)

A Radiation Work Permit (RWP) was prepared which specified the activities to be performed and all radiological safety requirements for the work. All personnel assigned to site work were required to read and sign the RWP, acknowledging that they understood the requirements prior to beginning work.

The RWP was used as an information document for industrial safety. Hazards other than radiological were included in the RWP so proper protection was taken for all known or suspected hazards. The RWP clearly specified the need for a briefing on the radiological conditions present in the work environment.

The RWP listed the tasks and specific levels of protection for each worker covered by the RWP. The RWP also detailed the dosimetry requirements, the protective clothing requirements, and the expected radiation and contamination levels to be encountered during the field survey activity.

A copy of the RWP is presented in Appendix A of this report.

4.2 PERSONNEL MONITORING AND DOSIMETRY

New World Technology administrative policies require the use of external dosimetry on any field project that has the potential for exposure to radioactive material. The Project Manager (PM) (or its designee) was responsible for ensuring that all NWT personnel assigned to perform the survey were monitored for exposure to ionizing radiation. Each individual working at the site wore the dosimetry devices specified in the RWP. Monitoring devices consisted of a thermoluminescent dosimeter (TLD) or film badge. A Badge Issue Log was used to document monitoring devices issued to personnel.

4.3 BIOASSAY SAMPLING

Bioassay samples (urine) were collected from NWT personnel at the end of the project to verify that no exposure to radioactive materials had occurred. The samples were sent to NWT's laboratory in Livermore, CA for liquid scintillation analysis.

The results of the samples indicated that no internal exposure to radioactive material had occurred during the course of the project.

The laboratory results of the samples are presented in this report in Appendix E.

4.4 SURFACE WATER PUMPING ACTIVITIES

Five one-liter water samples were collected to evaluate thorium from each discrete free-standing water location requiring pumping and composited into a 5-liter sample prior to mobilization on July 1st. A volume of 1-liter was then extracted from the 5-liter composite, after thorough mixing and sent to Paragon Analytics of Fort Collins, CO for analysis of elemental thorium concentration using ICP Mass Spec (Inductively coupled plasma – mass spectrometry). The results of the analysis was obtained prior to mobilization efforts for the final status survey. A sample of surface water was also collected from a marshy area along North Line Road about one-half mile from the AOC to serve as a background reference point. The results were compared to the U.S. Nuclear Regulatory Commission limits for release of thorium (Th-232) in liquid effluents from licensed facilities (3.0 E-8 µCi/ml).

All of the samples results were below 3.0 E-8 µCi/ml. The free standing water was then pumped from the areas in accordance with Section 4.4 of the "Revised Final Status Survey Plan, Ravenna Army Ammunition Plant, Former West Tank Farm Area Monazite Sand Removal Project, Phase IV, USA-00-005, Revision 5, April 9, 2004."

The following is an outline of the steps taken to pump the surface water:

- The water was pumped and discharged within a grassy area in the AOC. The discharge rate was controlled to prevent ponding, channeling, and runoff. No water was discharged into ditches, creeks, streams, etc., (i.e. waters of the state of Ohio). The end of the discharge hose/device contained a filter to trap any potential sediments.
- The pump suction was placed as close to the surface as possible to avoid disturbing and entraining the underlying mud/soil.
- After the water was removed the soil surface dried through evaporation within a few days.

The following tasks were performed immediately following mobilization for the Final Status Survey effort:

- pump-down areas of standing water
- monitoring pumped areas to identify if follow-up pumping was needed

Control of pump suction and discharge was achieved by:

- maintaining the suction intake at the surface by placing it on a floatation device
- installing a 10 micron filter sock on the intake hose
- installing a 10 micron filter on the discharge hose/device
- controlling the flow of water to prevent ponding, channeling , and runoff
- observation of pump operation – and pump shutoff if control of the suction was compromised

These controls prevented entrainment of sediment into the water discharged from the areas being pumped and soil erosion due to the impingement of the discharged water.

5.0 RADIOLOGICAL SURVEY OVERVIEW

This section describes the overall approach to performing the remediation control surveys and sampling, including radiation detection methods used, survey design, statistical considerations, and determining whether the site meets the remediation goal. Subsequent sections describe the detailed instrument performance characteristics and survey operations.

5.1 DETECTION METHODS

Gamma detector response rate measurements and soil sampling and analysis were used during the radiological surveys. Field survey methodology, techniques, and terminology conformed to the Federal guidance document MARSSIM (Revision 1, August 2000). Section 5 provides specific details as to how the surveys were performed.

5.2 DERIVED CONCENTRATION GUIDELINE LIMITS (DCGL'S)

The DCGL's established for the site are:

5.2.1 Soil

The Ohio Department of Health (ODH) and Nuclear Regulatory Commission (NRC) approved 4 pCi/g of Th^{232}. as the DCGL for release of the site.

The DCGL was derived by New World Technology using the resident farmer scenario and site-specific parameters, along with the appropriate dose and conversion factors. These scenarios, parameters, and factors were then inputted into the RESRAD Modeling Code Version 6.21 which provided the site specific $DCGL_W$.

The DCGL complies with the NRC dose-based release criteria of 25-mrem/yr total effective dose equivalent (TEDE).

5.2.2 Equipment And Tools

a) 1,000 dpm/100 cm^2, averaged over 1 m^2
b) 3,000 dpm/100 cm^2, maximum.
c) 200 dpm/100 cm^2 removable.

As defined in: "Guidelines for Decontamination of Facilities and Equipment Prior to Release for Unrestricted Use or Termination of Licenses for Byproduct, Source, or

Special Nuclear Materials (NRC 1987), Office of Nuclear Material Safety and Safeguards (NMSS)."

5.3 DATA QUALITY OBJECTIVES (DQOs)

The objective of this final status radiological survey is to obtain data to demonstrate that the AOC meets the criteria for unrestricted release defined by contamination levels below the approved DCGLs. Gamma scan surveys and laboratory analysis of soil samples will be used to meet this objective.

A summary of the Data Quality Objectives (DQO) process is given in Table 2.

The results of this process include:

- Definition of hypothesis for testing achievement of DCGLs
- Decision-error tolerance limits
- Parameters to implement the MARSSIM methodology for estimation of number of samples (LBGR, relative shift, etc)
- Estimates of variability of soil concentrations of Th-232 in the reference area and in the impacted areas
- Minimum detectable concentrations (MDCs) for the soil sample analytical method

These items are discussed in the following sections. Regarding the last bullet, the qualified vendor laboratory will be able to, *a priori*, achieve a Minimum Detectable Activity (MDA) of less than or equal to 1.0 pCi/g. This level of activity represents less than 25% of the specified DCGL of 4.0 pCi/g.

Table 2 Data Quality Objectives

DQO STEP	DQO
State the Problem	Radioactive material storage may have resulted in the release of radioactive materials to soils in the AOC.
Identify the Decision	Does the residual radioactivity in the survey units exceed the release criteria?
Identify Inputs to Decision	Confirmation that radionuclides were used. Types of radionuclides that are present at the facility. Physical characteristics of the survey areas. Physical and chemical form of radioactive material (is it dispersible?). Area classification (1, 2, or 3). Surface release criterion (DCGL). Residual radioactivity levels in suspect areas and background survey unit. Quantitative data from survey units.
Define the Boundaries of the Study	The AOC (~10,000 m^2) at the West Tank Farm area. Figure 2 of this report identifies the area.
Develop a Decision Rule	Determine if results of analytical measurements exceed the release criteria (DCGL). The null hypothesis is that individual survey units exceed the average concentration in the reference area by 4.0 pCi/g. The type I and Type II decision error probabilities are set at 0.05. The Wilcoxon Rank Sum Test was used to compare survey unit data to the background reference area data.
Specify Limits on Decision	For Th-232 the DCGL is set at 4.0 pCi/g.
Optimize Design	Described in the sections below.

5.4 GAMMA SCAN SURVEY ACTION LEVEL

The Action Level for the gamma scan survey was 16,000 CPM gamma based upon past gamma scan surveys at the site and soil sampling data.

5.5 FINAL STATUS SURVEYS

5.5.1 Survey Objectives

The final status radiological survey was used to develop data to support a recommendation for unrestricted release (from a radiological constituents only aspect) of the areas and document the final radiological status of the monazite sand site at RVAAP.

Thorium levels in the soil are required to meet a clean-up goal ($DCGL_W$) of 4.0 pCi/g. In meeting this limit, the survey was designed to limit Type I and Type II errors to 5%. That is, survey units exceeding the $DCGL_W$ will be missed with less than 5% probability,

and survey units meeting the $DCGL_W$ will be rejected as too high with less than 5% probability.

By meeting the established $DCGL_W$, the site will meet the dose-based release criteria of 25-mrem/yr total effective dose equivalent (TEDE) as defined in 10 CFR Part 20.1402.

5.5.2 Survey Unit Classification

Class 1 areas are those areas that are known to contain, or are strongly suspected to contain , contamination due to historical activities. Areas that were previously decontaminated or remediated are Class 1 areas. All of the survey units at the West Tank Farm area were classified as Class 1 survey units.

This site was divided into six Class 1 survey units. These are presented in Figure 3.

In addition, a two-foot perimeter around the entire AOC was established as a Class 2 buffer area (Figure 4).

Figure 3 Survey Unit Layout Diagram

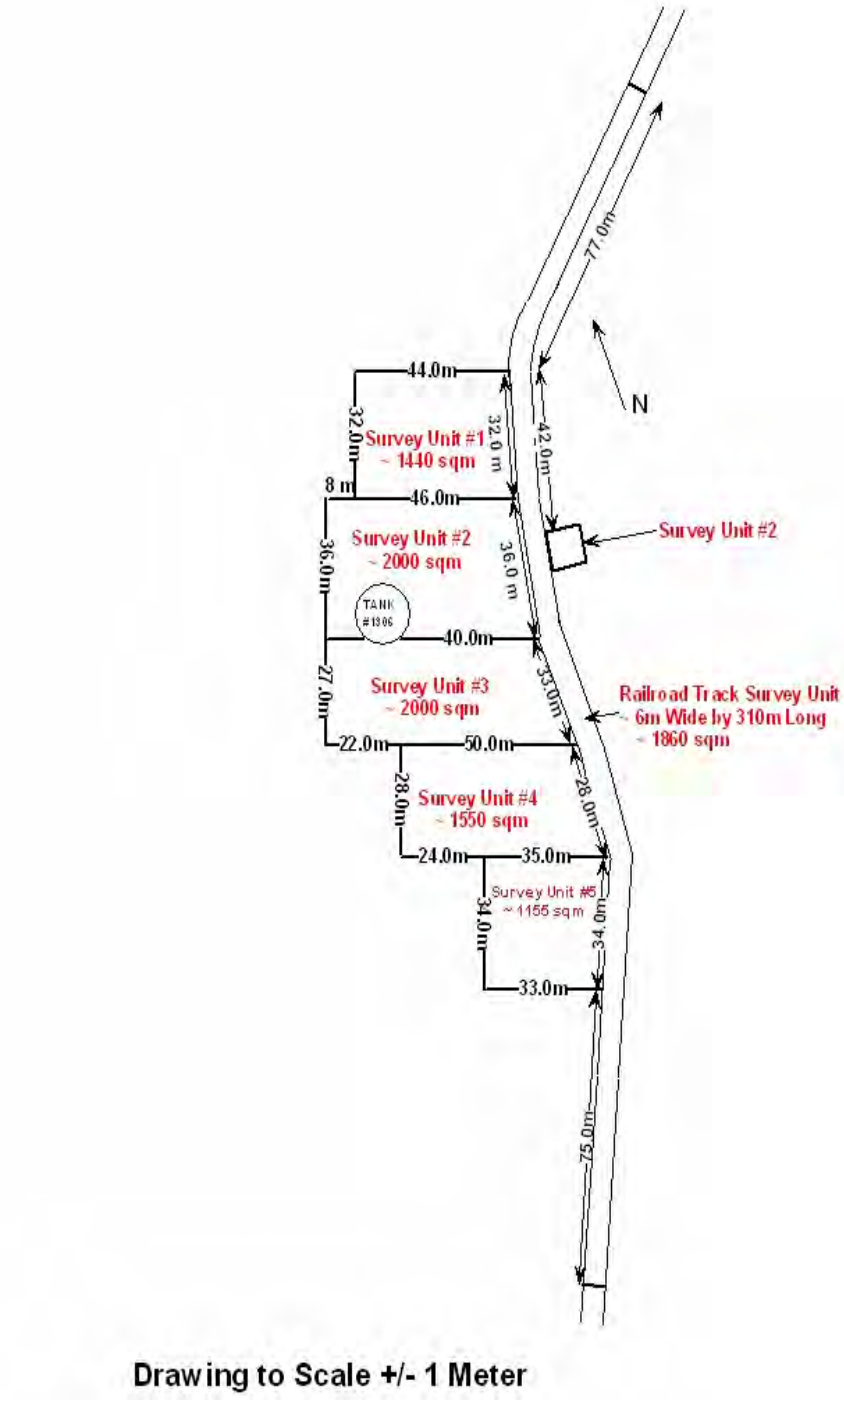

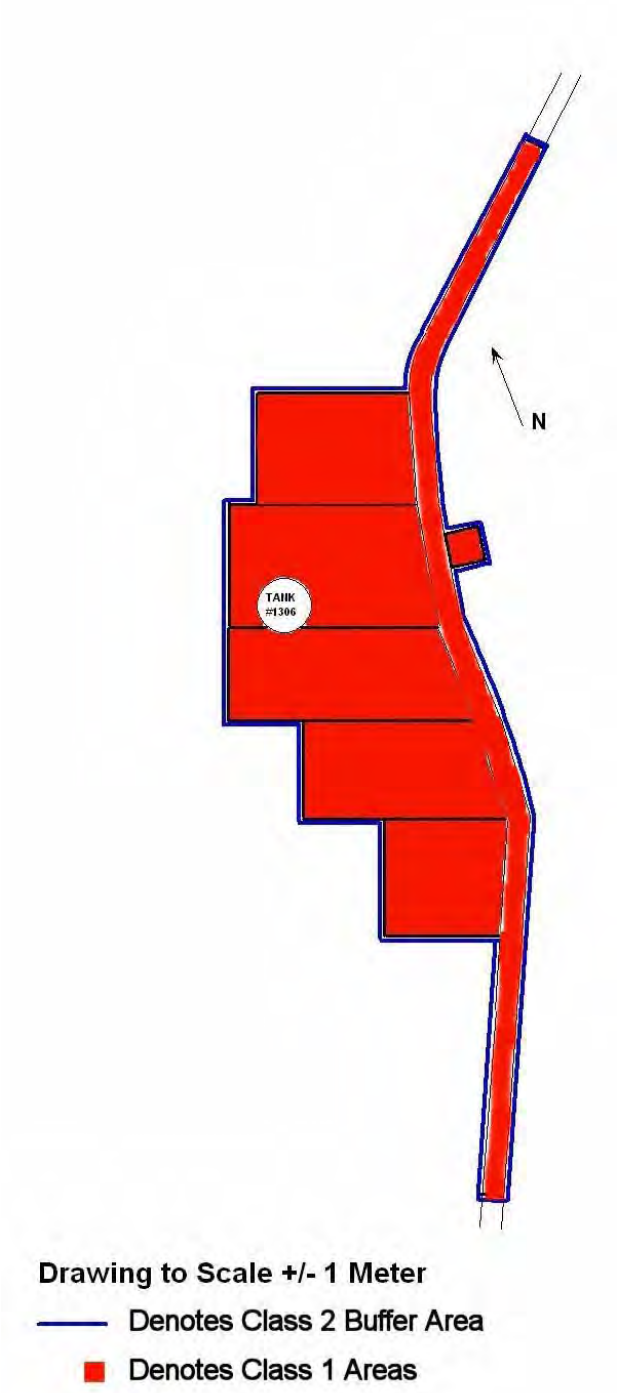

Figure 4 Class 2 Survey Unit Map

5.5.3 Systematic Sampling

It is important to randomly sample a site, so that each part of the site has an equal chance of being sampled. This type of sampling is called systematic.

Systematic sampling using a random start point was employed at the West Tank Farm Area. The gamma count rate surveys that were performed gave all areas of the site 100 % coverage.

5.5.4 Biased Sampling

Biased sampling was performed at areas that were remediated, following identification during the gamma scan survey that exceeded the action level defined in Section 5.4 of this report.

5.5.5 Measurements Of Gamma Count Rate

Prior to conducting any soil sampling, ground surfaces were 100 % gamma scan surveyed to identify the presence of elevated direct radiation that might indicate residual concentrations of monazite sand.

5.5.6 Instruments

Gamma count rate responses were used to determine whether specific areas exhibit activity levels that are above the site-specific background. Gross gamma count rates were measured using a 2" by 2" sodium iodide (NaI) gamma scintillation detector system (Ludlum Instruments Model 2350-1 Data Logger coupled to a Ludlum Instruments Model 44-10 NaI or the equivalent). This radiation detection system measures energies in the range of about 80 to 3,000 kilo electron Volt (keV). This energy range includes gamma rays emitted by Thorium-232 and its decay products.

Although the gamma scanning method planned for use during the remediation is not specific to Th-232, it can be used since Th-232 (and daughters) are the only nuclides known to be present above background levels. Thus, any increase in gamma count rate is attributed to them.

Scanning speeds were no greater than 0.5 m per second for gamma instruments. The detector was held within four inches of the surface being surveyed. The detector was moved back and forth in a serpentine pattern to ensure 100% coverage of the surface. Audible indicators were used to identify locations having elevated levels of direct radiation.

The data loggers were operated in rate-meter mode with a log frequency of four to six seconds. A count rate of 16,000 CPM was used as an action-level (see Section 5.4) for investigation and the audible alarm on the data loggers was set at 16,000 CPM. When count rates above this level were observed, the location was marked with a surveyor's pin-flag. The marked locations were then subjected to a more detailed survey to evaluate the presence of elevated thorium activity and to delineate the areas requiring further remediation.

5.6 REMEDIATION OF ELEVATED AREAS OF ACTIVITY

Six areas in Survey Unit #2, seven areas in Survey Unit #3, two areas in Survey Unit #4, and four areas in Survey Unit #5 identified in Figure 5, Figure 6, Figure 7, and Figure 8 respectively required remediation. All of the areas of elevated activity were smaller than 2 m^2.

Empty 55-gallon drums were staged adjacent to the area to be remediated.

A backhoe and hand tools were used for soil removal. The contamination was limited to the uppermost six inches of soil

Once the top six inches was removed from the area, using the backhoe (and hand tools as necessary) the soil was placed into the 55-gallon drums.

A 100 % gamma scan survey was then performed of the areas remediated to confirm the action level of 16,000 CPM gamma was met.

If any area(s) exceeded the action level an additional 4 inches of the soil was removed and the gamma scan survey repeated. These steps were repeated until the release criterion was met.

5.6.1 Packaging Of The Waste Materials

The soil was placed into 19 clean 55-gallon drums and labeled for transport. The drums lids were sealed after loading to protect the container contents from rain intrusion, and prevent leakage of the drums contents. The volume of materials requiring disposal was 142.5 cubic feet.

5.6.2 Shipment And Disposal Of The Waste Materials

The waste materials were shipped shortly after loading to, U.S. Ecology in Grandview, Idaho, an authorized disposal facility.

The waste was classified as “Soil, Non DOT Regulated".and the NWT broker (AFSC qualified) prepared all necessary Department of Transportation (DOT) and procedurally required forms (Radioactive Shipment Record, Bill of Lading, etc.). The labeled 55-gallon drums were loaded onto a closed van truck for transport to the disposal facility. All DOT shipping and labeling requirements were met prior to release of the closed van truck from the site.

Copies of the shipping documents were provided to AFSC personnel and are presented in Appendix C.

R & R Trucking provided daily tracking updates, providing the location of the closed van used to transport the drums to U.S Ecology of Grandview Idaho. Once the material was received by the disposal facility, the appropriate documents were completed, returned to NWT and are presented in Appendix C.

5.7 REMEDIATION CONTROL SURVEYS AND SOIL SAMPLING

5.7.1 Remediation Control Survey Objectives

The results of the remediation control surveys and sampling provide support data that the West Tank Farm area was prepared for a Final Status Survey.

The thorium level in the site's soil is required to meet a clean-up goal (DCGL) of 4.0 pCi/gram. The final status survey is designed to limit Type I and Type II errors to 5%. That is, survey units exceeding the DCGL will be missed with less than 5% probability, and survey units meeting the DCGL will be rejected as too high with less than 5% probability at a 95 % confidence level.

By achieving the established DCGL the site will meet the dose-based release criteria of 25-mrem/yr total effective dose equivalent (TEDE).

Figure 9, Figure 10, Figure 11, and Figure 12 show the location of the remediation control samples collected from Survey Unit #2, #3, #4, and #5 respectively.

5.7.2 Summary of Results

All of the remediation control samples were below the DCGL of 4.0 pCi/g, with the exception of sample SU3-RCS-7, which was 4.09 pCi/g. Even though the result of this sample was above the DCGL, based upon the size of the area (~ 2 m^2), the results are below the $DCGL_{EMC}$ of 7.6 pCi/g calculated in Section 5.9.6 of this report which is based upon a size of 90 m^2. A summary of the results are presented in Table 3 below.

Table 3 Remediation Control Sample Summary Table

Sample ID#	Ac-228 Results in pCi/g	2 σ Uncertainty +/- pCi/g
SU5-RCS-3	0.62	0.26
SU5-RCS-4	1.55	0.41
SU2-RCS-1	3.11	0.48
SU2-RCS-2	0.34	0.29
SU2-RCS-3	2.42	0.50
SU2-RCS-4	2.86	0.57
SU2-RCS-5	1.48	0.42
SU2-RCS-6	1.77	0.42
SU5-RCS-1	2.39	0.46
SU5-RCS-2	0.51	0.28
SU3-RCS-1	0.46	0.32
SU3-RCS-2	0.82	0.29
SU3-RCS-3	0.78	0.25
SU3-RCS-4	0.35	0.40
SU3-RCS-5	0.90	0.21
SU3-RCS-6	1.84	0.42
SU3-RCS-7	4.09	0.73

SU4-RCS-2	3.76	0.42
Average:	**1.79**	
Maximum:	**4.09**	
Standard Deviation:	**1.27**	

5.8 EQUIPMENT RELEASE SURVEYS

The equipment (trash pump, backhoe, forklift, etc.) used during the remediation and final status survey/sampling effort was surveyed to ensure it did not become contaminated with the radioactive sand using appropriate instrumentation. All of the equipment met the release criteria defined in Section 5.2.2 of this report. Copies of the release surveys of the equipment are presented in Appendix D.

5.9 STATISTICAL CONSIDERATIONS

5.9.1 Null Hypothesis

Using the MARSSIM methodology, the null hypothesis is stated as "the residual activity in the survey unit exceeds the release criteria" (Revision 1, August 2000). Thus, in order to pass the survey unit (that is, release the area), the null hypothesis must be rejected. If

necessary, the Wilcoxon rank-sum test was used on the soil data to test the null hypothesis.

5.9.2 Demonstration of Compliance

When determining compliance with remediation goals, one measurement does not determine compliance. The entire site is examined using statistical data for performing three compliance tests that are listed in Table 4, and summarized as:

- Compare the largest site measurement to the smallest background measurement.
- Compare the average site measurement to the average background measurement.
- Use the Wilcoxon rank sum test (MARSSIM, Revision 1, August 2000) to determine if the site data (less background) exceed the DCGL.

Table 4 Statistical Comparisons With The DCGL

Survey Result	Conclusion
Difference between the largest survey measurement and the smallest background reference area measurement is less than the soil contamination release limits.	Site meets release criterion.
Difference of survey unit and background reference area average is less than the soil contamination release limits.	Site meets release criterion.
Difference between any survey unit measurement and any background reference area measurement greater than the soil contamination release limits and the difference of survey unit average and background reference area average is less than the soil contamination release limits.	Site meets release criterion if Wilcoxon Rank Sum Test rejects the hypothesis that the survey unit exceeds the release criterion.

5.9.3 Scanning Minimal Detectable Count Rate, (MDCR)

The minimum detectable number of net source counts in the interval is given by S_i. Therefore, for an ideal observer, the number of source counts required for a specified level of performance can be determined by multiplying the square root of the number of background counts (determined to be ~ 11,000 cpm) by the detectability value (d') associated with the desired performance (Type I (α) false positive decision error of 5%, and Type II (β) false negative decision error of 5%). The detectability value (d') for a Type I decision error of 5% and a Type II decision error of 5% is obtained from Table 6.5 of MARRSSIM. The scan time interval is two seconds.

$$S_i = d' \sqrt{b_i}$$

Where:

d' = index of sensitivity (α and β error)

b_i = number of background counts in scan time interval

$d' = 3.28$

$b_i = 11{,}000x(2 / 60)$

$b_i = 367$ counts

Therefore:

$S_i = 3.28\sqrt{367}$

$S_i = 63$

The MDCR is then calculated using the formula below:

$$MDCR = S_i x(60 / i)$$

Where:

i = scan time interval

Therefore:

$MDCR = 63x(60 / 2)$

$MDCR = 1890$ cpm

The $MDCR_{surveyor}$ may then be calculated assuming a surveyor efficiency (p) of 0.5 as follows:

$$MDCR_{surveyor} = 1890/\sqrt{0.5}$$

$$MDCR_{surveyor} = 2673 \text{ cpm}$$

Note: The surveyor efficiency is a factor that represents the probability of a count being recorded by the surveyor's decision process. The results of defined-interval confidence rating experiments indicate that this factor is no greater than 0.75. The monitoring (undefined interval) results, along with human factors literature, suggest that a value of 0.5 is more appropriate in estimating minimum levels detectable in the field.

For example, the determined background count rate at the RVAAP West Tank Farm Area is approximately 11,000 cpm. The instrumentation uses a two second scan interval.

Using an index of sensitivity of 3.28 (95% true positive rate and 5% false positive rate); the $MDCR_{surveyor}$ is 2,673 cpm (or 13,673 cpm-gross).

5.9.4 Scan MDC for Land Areas

In addition to the MDCR and detector characteristics, the scan MDC (in pCi/g) for land areas is based on the area of elevated activity, depth of contamination, and the radionuclide (*i.e.*, energy and yield of gamma emissions). If one assumes constant parameters for each of the above variables, with the exception of the specific radionuclide in question, the scan MDC may be reduced to a function of the radionuclide alone.

The minimum detectable exposure rate is calculated by dividing the count rate (2673 cpm) by the count rate to exposure rate ratio for the radionuclide of interest (830 cpm per μR/h). The minimum detectable exposure rate is determined for this detector and radionuclide. The manufacturer (Ludlum Measurements, Inc.) of the NaI(Tl) scintillation detector quotes a count rate to exposure rate ratio for Th-232 and it's daughters in equilibrium of
830 cpm per μR/h The minimum detectable exposure rate for this example is 3.0 μR/h.

Modeling (using Microshield ™ Version 5.05) was used to determine the net exposure rate produced by 4.0 pCi/g of Th-232 and it's daughters of contaminated soil.

The assumptions used in the modeling include :

The dose point of 2 inches above the soil was used.

The density of 1.6 g/cm^3 was used for soil.

The depth of the area of elevated activity was 15 cm.

The areal dimension of the cylindrical area of elevated activity was .25 m^2.

The corresponding minimum detectable exposure rate was then determined for a 2" by 2" NaI(Tl). The modeling code performed the appropriate calculations and determined an exposure rate of 5.5 μR/hr for Th-232 (which accounts for buildup).

A count rate due to the presence of Th-232 in soil at a concentration of 4.0 pCi/g can then be calculated by the following:

$$\frac{830 \text{ cpm}}{\mu\text{R/hr}} x \ 5.5 \ \mu\text{R/hr} = 4565 \text{ cpm}$$

The radionuclide concentration of Th-232 (scan MDC) necessary to yield the minimum detectable exposure rate (3.0 μR/hr) may be calculated using the following formula.

$$\text{ScanMDC} = \frac{4.0 \text{ pCi/g } (3.0 \ \mu\text{R/hr})}{5.5 \ \mu\text{R/hr}} = 2.2 \text{ pCi/g}$$

5.9.5 Calculation of Number of Samples To Be Collected From Survey Units

An important factor in performing Wilcoxon Rank Sum Test is the number of samples taken. A minimum number must be taken. The minimum is calculated based on confidence limits, the general distribution of the contaminant at the site, the $DCGL_w$ and other factors.

The number of soil samples, to be obtained for the Wilcoxon Rank Sum Test is calculated using the following formula:

$$N = \frac{(Z_{1-\alpha} + Z_{1-\beta})^2}{3(P_r - 0.5)^2} \text{ x } 1.2$$

where,

N = number of samples (reference area and survey unit);

$Z_{1-\alpha}$ = percentile represented by selected value of $\alpha = 0.05$;

$Z_{1-\beta}$ = percentile represented by selected value of $\beta = 0.05$; and

P_r = the probability that a random measurement from the survey unit exceeds a random measurement from the background reference area by less than the $DCGL_w$ when the survey unit median is equal to the LBGR above background

1.2 = correction factor for additional 20% samples

The highest calculated standard deviation was 2.5 based on the results of soil samples obtained during the last Final Status Survey effort performed by NWT.

The initial step in determining the number of data points is to calculate the relative shift, $\Delta/\sigma = (DCGL-LBGR)/\sigma$, from the DCGL value, the lower bound of the gray region (LBGR), and the standard deviation of the contaminant in the survey unit, σ.

The lower bound of the gray region (LBGR) value was adjusted to 1.5 to result in a recommended relative shift of between 1 and 3.

The calculated value of the relative shift was 1.0.

The P_r was used to calculate the minimum number of data points necessary for the survey to meet the DQOs. The value of the relative shift calculated above was used to obtain the corresponding value of P_r from Table 5.1 in Chapter 5 of MARSSIM.

The value of P_r is 0.760217

The percentiles, $Z_{1-\alpha}$ and $Z_{1-\beta}$, represented by the selected decision error levels, α and ß, respectively are calculated from Table 5.2 in Chapter 5 of MARSSIM.

The value of the percentiles $Z_{1-\alpha}$ and $Z_{1-\beta}$ is 1.645.

Therefore:

$$64 = \frac{(1.645+1.645)^2}{3(0.760217-0.5)^2} \text{ x } 1.2$$

The calculated number of samples (for reference area and each survey unit) required to demonstrate compliance using the Wilcoxon Rank Sum Test is 32.

5.9.6 Determining Data Point for Small Areas of Elevated Activity

In addition to satisfaction of tests for comparison of survey unit sample means (medians) to DCGLs (see discussion of $DCGL_W$ and the Wilcoxon Rank Sum test in Sections 5.2 and 5.9.8), consideration is given to treatment of small areas of elevated activity. An evaluation was conducted to determine an appropriate value for $DCGL_{EMC}$, the guideline value applied to small areas of elevated activity. For this survey, the largest "un-sampled area" in a Class 1 survey unit is about 90 m^2 (see Section 5.9.9, Table 4). An Area Factor value of 1.9 for Th-232 corresponding to 90 m^2 is obtained from MARSSIM Table 5.6 (by interpolation). The $DCGL_{EMC}$ is then found to equal ~ 7.6 pCi/g Th-232 ($DCGL_{EMC}$ = Area Factor x DCGL, or 1.9 x 4.0 pCi/g). The $DCGL_{EMC}$ determines the scan sensitivity needed to ensure that potential areas of elevated activity (that could lie between sampled areas) would be detected. The $DCGL_{EMC}$ compares well to the scanning MDC estimated in Section 5.9.4 (2.2 pCi/g). Since the Area Factor is determined from actual sampling plans for the site, *a posteriori*, no additional samples are required to provide assurance that small areas of elevated activity are properly assessed.

5.9.7 Confidence Levels

The survey was designed to limit Type I and Type II errors to 5%. The Critical Value for the Wilcoxon Rank Sum Test was calculated from these probability values and from the number of samples/measurements taken for each survey unit.

5.9.8 Statistical Wilcoxon Rank Sum Test

The Wilcoxon Rank Sum test is used to compare two groups of data, to determine if there is a significant difference in the groups.

For this case, the $DCGL_w$ is added to each of background soil sample results that were obtained in the background reference area to obtain the adjusted reference area measurement Z_i.

The *m* adjusted reference sample measurements, Z_i, from the reference area and the *n* sample measurements, Y_i, from the survey unit are pooled and ranked in order of increasing size from 1 to N, where N = *m*+*n*. For this case N=64.

If several measurements are tied *(i.e.*, have the same value), they are all assigned the average rank of that group of tied measurements.

If there are *t* "less than" values, they are all given the average of the ranks from 1 to *t*.

Therefore, they are all assigned the rank t(t+1)/(2t) = (t+1)/2, which is the average of the first *t* integers. If there is more than one detection limit, all observations below the largest detection limit should be treated as "less than" values.

The ranks of the adjusted measurements from the background reference area are then summed, W_r.

Since the sum of the first N integers is N(N+1)/2, one can equivalently sum the ranks of the measurements from the survey unit, W_s, and compute $W_r = N(N+1)/2 - W_s$.

Compare W_r with the critical value given in Table I.4 found in Appendix I of MARSSIM for the appropriate values of n, m, and α. If W_r is greater than the critical value, the hypothesis that the survey unit exceeds the release criterion is rejected.

For the case of *n >20* and *m >20* the critical value is calculated using the following equation.

$$m(n+m+1)/2 \; + \; z\sqrt{nm(n+m+1)/12}$$

For this case *n*=32 *m*=32 and α=0.05.

If the test shows that the first group is larger than the second, then the $DCGL_W$ is not met.

5.9.9 Reference Grids

A reference coordinate system was laid out for each of the survey units. A square shaped grid system was used for the Final Status Surveys. The length, L, of a side of the square grid was determined by the total number of samples or measurements to be taken. The length of the square determined the distance between direct measurement/soil sample location points (NUREG-1505). The length or spacing of the grids was calculated for each of the survey units using the following equation:

$$L = \sqrt{\frac{A}{N}}$$

Where,

L = length of squares grids (m);

A = surface area of the survey unit (m^2); and

N = statistically calculated number of samples.

The length of the measurement/sampling intervals for each of the survey units is presented in Table 5 below.

Table 5 Survey Unit Interval Table

SURVEY UNIT #	SURVEY UNIT SIZE IN SQUARE METERS	SAMPLING INTERVAL IN METERS	NUMBER OF SOIL SAMPLES	CALCULATED CRITICAL VALUE
Railroad Tracks	1860	9.5	32	158

5.10 BACKGROUND REFERENCE AREAS

5.10.1 Soil

The background reference area is located approximately 1.1 miles east of the intersection of Route 80 and North Line Road along, and to the north of North Line Road. This area was chosen for the background reference area because it has similar physical, chemical, geological, natural radiological, and biological characteristics as the West Tank Farm area and is not impacted by former operations.

A total of thirty-two gamma scan readings were collected (see Table 20 and Table 21) at 2-4 inches from the ground surface at random locations within the background reference area using a 2" by 2" NaI detector coupled to a Ludlum Model 2350-1 Data Logger. The average background count rate was approximately 12,000 CPM gamma.The results of the background reference area survey are presented in Appendix F.

Thiry-two (32) background samples were collected from the surface (within 6 inches) at randomly selected locations within the background reference area.

The samples were sent to Paragon Analytic's laboratory in Fort Collins, CO for gamma spectral analysis. The average Ac-228 activity level in the soil background reference area was 1.0 pCi/g. The results are summarized in Table 5.

5.10.2 Railroad Tracks

The background reference area for the railroad track ballast is located approximately 1.1 miles east of the intersection of Route 80 and North Line Road along, and to the south of North Line Road. This area was chosen for the background reference area because it has similar physical, chemical, geological, radiological, and biological characteristics as the railroad tracks at the West Tank Farm area and is not impacted by former operations.

A total of thirty-two gamma scan readings were collected (see Table 20 and Table 21) at 2-4 inches from the ground surface at random locations within the background reference area using a 2" by 2" NaI detector coupled to a Ludlum Model 2350-1 Data Logger. The average background count rate was approximately 12,000 CPM gamma. The results of the background reference area survey are presented in Appendix F.

A total of six (6) background samples were collected from the surface underneath the railroad ballast (within 6 inches) at randomly selected locations within the background reference area.

The samples were sent to Paragon Analytic's laboratory in Fort Collins, CO for gamma spectral analysis. The samples were sent to Paragon Analytic's laboratory in Fort Collins, CO for gamma spectral analysis. The average Ac-228 activity level in the railroad track background reference area was 0.86 pCi/g. The results are summarized in Table 6.

6.2 SOIL SAMPLING AND ANALYSIS

6.2.1 Surface Soil Samples

In each survey unit (6 Class 1) a minimum of 32 soil samples were collected from systematic locations using a random start point within each survey unit. Surface (0-15 cm deep) samples were collected from each sampling location. The calculations that were used to obtain the number of required samples are presented in Section 5.8.5.

Sampling equipment and tools were rinsed after each sample with clean tap water in a 55 gallon drum and surveyed to ensure no cross contamination occurred. If contamination was found above the minimum detectable count rate of the survey instrument, the equipment was then decontaminated by a wipe down with damp rags.

Approximately 300 to 500 grams of soil was collected from each location. Samples were prepared by removing vegetation, rocks, and foreign objects exceeding ¼-inch in diameter. Once prepared, the samples, were placed into an appropriate container. Collection methodology, chain of custody, and analysis requirements are detailed in NWT's FOP's.

Figure 12, Figure 13, Figure 14, Figure 15, Figure 16, and Figure 17 present the locations of the surface soil samples collected from each survey unit.

6.2.2 Laboratory Analytical Protocols

Samples were sent to Paragon Analytics laboratory in Fort Collins, CO for analysis by gamma spectroscopy. Gamma activity was determined for Ac-228, Pb-212, Bi-212, Tl-208, Pb-214, and Bi-214, the decay daughters of Th-232. Other peaks such as Cs-137, were also reported. The laboratory used the gamma emissions from the daughter product Ac-228 to determine the activity of Th-232.

The Paragon Analytics laboratory determined, *a priori*, that it could achieve a Minimum Detectable Activity (MDA) of less than or equal to1 pCi/gram. This level of activity represents 25% of the specified DCGL of 4.0 pCi/g. Paragon's gamma spectroscopy counting system was calibrated and QA/QC verified daily using NIST-traceable standards. Daily source and background checks were performed and documented.

The laboratory data for all of the soil samples collected during the final status survey is presented in Appendix G.

6.3 SOIL SAMPLE RESULTS

6.3.1 Railroad Track Survey Unit

All thirty-two soil samples collected in the Railroad Track survey unit were below the DCGL of 4.0 pCi/g. The average activity in the survey unit is 1.32 pCi/g.

A summary table showing the results of the soil samples obtained in the Class 1 Railroad Track survey unit is presented in Table 7.

The results of the gamma scan surveys and soil sampling along with the statistical Wilcoxon Rank Sum-Test indicate that the null hypothesis is rejected and that the survey unit meets the unrestricted release criteria as the survey unit mean activity level is less than the DCGL.

Reject null hypothesis: The survey unit mean is less than the DCGL(w) - the survey unit may be released

6.3.2 Survey Unit #1

All of the thirty-six soil samples collected in Survey Unit #1 were below the DCGL of 4.0 pCi/g. The average activity in the survey unit is 1.11 pCi/g.

A summary table showing the results of the soil samples obtained in the Class 1 Survey Unit #1 is presented in Table 8.

The results of the gamma scan surveys and soil sampling along with the statistical Wilcoxon Rank Sum-Test indicate that the null hypothesis is rejected and that the survey unit meets the unrestricted release criteria as the survey unit mean activity level is less than the DCGL.

Reject null hypothesis: The survey unit mean is less than the DCGL(w) - the survey unit may be released

6.3.3 Survey Unit #2

Thirty-four of the thirty-five soil samples collected in Survey Unit #2 were below the DCGL of 4.0 pCi/g. One sample (SU2-D2) was 4.0 pCi/g. The average activity in the survey unit is 1.26 pCi/g.

A summary table showing the results of the soil samples obtained in the Class 1 Survey Unit #2 is presented in Table 9.

The results of the gamma scan surveys and soil sampling along with the statistical Wilcoxon Rank Sum-Test indicate that the null hypothesis is rejected and that the survey unit meets the unrestricted release criteria as the survey unit mean activity level is less than the DCGL.

Reject null hypothesis: The survey unit mean is less than the DCGL(w) - the survey unit may be released

6.3.5 Survey Unit #4

All thirty-two of the soil samples collected in Survey Unit #4 were below the DCGL of 4.0 pCi/g. The average activity in the survey unit is 1.16 pCi/g.

A summary table showing the results of the soil samples obtained in the Class 1 Survey Unit #4 is presented in Table 1.

The results of the gamma scan surveys and soil sampling along with the statistical Wilcoxon Rank Sum-Test indicate that the null hypothesis is rejected and that the survey unit meets the unrestricted release criteria as the survey unit mean activity level is less than the DCGL.

Reject null hypothesis: The survey unit mean is less than the DCGL(w) - the survey unit may be released

7.0 QUALITY CONTROL AND QUALITY ASSURANCE

7.1 SURVEY QC

The NWT Project Manager ensured that survey technicians complied with Final Status Survey procedures and the FSS Plan requirements during their work in the field. Any deviations were resolved immediately to ensure compliance.

7.2 INSTRUMENTATION QC

Instrumentation used for the surveys was subjected to daily standard quality assurance (QA) tests. Performance checks including background, battery checks, efficiency determinations, and source checks were performed for all instruments. Performance checks were performed using National Institute of Standards and Technology (NIST) traceable sources and documented according to SOPs daily before each use. The daily source check was compared to the one established after calibration, to ensure measurements were within ± 20% of the established average. Instruments were calibrated within one year of use. Calibration certificates, minimum detectable activity (MDA) calculations, and chi-square determination are presented in this report in Appendix B.

The goal of quality assurance and quality control (QA/QC) is to identify and implement sampling and analytical methodologies that limit the introduction of error into analytical data. For the purposes of this report, a system was required to ensure that radiological survey data are of the type and quality to support their intended use. Both the project and the corporate QA/QC programs are designed to ensure that all quality and regulatory requirements are satisfied.

Quality assurance issues related to data verification and reliability was handled according to approved and controlled FOPs and the Work Plan (WP).

7.3 TRAINING AND CERTIFICATION OF STAFF

Personnel performing activities associated with the Final Status Surveys of the West Tank Farm Area received training covering the Revised Final Status Survey Plan.

All on-site project personnel had completed at least 40 hours of hazardous waste operations-related training (HAZWOPER), as required by the Occupational Safety and Health administration (OSHA) Regulation 29 CFR Part 1910.120. Those personnel who had completed the 40-hour training more than 12 months prior to start of field activities were required to have completed an 8-hour refresher course within the past twelve months.

Personnel operating the portable survey detection equipment were qualified ANSI 3.1 Senior Health Physics Technicians based on training and experience outlined in Section 4.4.6 and 4.5.3.2 of ANSI standard ANSI/ANS-3.1-1993 (ANSI/ANS, 1993). The personnel were also familiar with the handling and storage of radioactive materials, contamination controls, and the use of radiation survey equipment.

A formal review and documentation of the key personnel qualifications to perform the required work was made by project management and verified prior to starting work.

Copies of the training records and files are located in the project files at the NWT Corporate Office in Livermore, CA and are available upon request.

7.4 DATA MANAGEMENT

Documentation of all surveys and associated data was performed as detailed in the NWT Work Plan and specific NWT procedures.

Survey data was obtained and recorded electronically in the field. Once collected, it was reviewed by knowledgeable individuals not directly involved in the collection of the data for completeness. Once reviewed, the data was maintained on a single computer and backup copies of the information were made. Analysis and presentation of the data was in accordance with guidance provided in MARRSIM.

Field samples were collected and controlled using Chain of Custody protocols as detailed in NWT operational procedures. The resultant laboratory analysis results were compared to the DCGL of 4.0 pCi/g of Th-232. The individual results and laboratory QA/QC results were reviewed for completeness and reasonableness.

8.0 CONCLUSION

Based upon the gamma scan survey results and soil sample analysis, the West Tank Farm Area meets the established radiological release criteria for unrestricted use. Survey and sample results from all areas were compared to the established DCGL using statistical analysis guidance as provided in MARRSIM. The DCGL of 4.0 pCi/g of Th-232 was met in all cases, resulting in a calculated TEDE to the maximally exposed individual of less than 25 mrem/y.

RVAAP, West Tank Farm Visitor Briefing

New World Technology (NWT) has been contracted by the U.S. Army, Field Support Command (AFSC) to perform Final Status Surveys at the West Tank Farm area of the Ravenna Army Ammunition Plant (RVAAP), in Ravenna Ohio. The sands had been stored as a part of the strategic stockpile plan under the General Services Administration (GSA), later the Defense Logistic Agency (DLA). The monazite sand had been removed in the mid 1970's and the license for possession issued by the Atomic Energy Commission was terminated at that time.

RVAAP is located in northeastern Ohio spanning areas of both Trumbull and Portage counties. The plant was a Department of Defense (DOD) facility for the loading, assembling, packing, and storage of ammunition and explosives. The plant began operations in 1940 and ended during the 1970s. Portions of the installation are being re-utilized by the Ohio National Guard.

Sections of the facility were utilized by the General Services Administration (GSA) for storage of strategic materials. Among the materials stored at the facility were quantities of monazite sand (thorium ore) totaling approximately 3 million pounds. The sand contained measurable quantities of natural thorium (Th-nat). Atomic Energy Commission license was terminated in the mid 1970s following transfer of the materials out of country.

The area is in a remote section of RVAAP. There are no physical barriers (i.e. fencing) protecting the area from potential access. The AOC presents no immediate hazard to facility personnel or the environment due to the fact that the areas of contamination are small in size and are low in activity levels.

The monazite AOC consists of an approximately 10,000 m^2 area between and along two former railroad lines in the West Tank Farm area of the RVAAP. The GSA owned the monazite sand and leased two tanks from RVAAP to store the ore from the late 1950's to 1974. The two storage tanks (Tanks 1303 and 1305) were used to store approximately 3,023,553 pounds of the sand. The monazite sand contained less than 10-percent natural Thorium. The data on the license application indicates 170,000-pounds of thorium or approximately 6-percent of the total weight.

The sand was removed and shipped to Holland under an AEC approved action under export license STE-8179. The historical documentation of this export consists of the AEC license application and a few letters from GSA. It is unclear if the license number STE-8179 is an AEC number. GSA's policy of destroying records seven years after transactions has limited the available records.

Monazite sand was the only radioactive material stored at RVAAP. Monazite is a very insoluble and stable crystal structure and does not degrade in typical environmental conditions. Thorium is not very mobile in the environment and is normally only distributed by physical means.

Current whole body dose rates at the site are 7-10 microR/hour.

Other hazards at the site include insects, and poisonous plants.

Thorium

Symbol: **Th**

Atomic Number: **90** *(protons in nucleus)*

Atomic Weight: **232** *(naturally occurring)*

What Is It? Thorium is a radioactive element that occurs naturally in low concentrations (about 10 parts per million) in the earth's crust. It is about three times as abundant as uranium and about as abundant as lead or molybdenum. Thorium in its pure form is a silvery-white heavy metal that is about as dense as lead. In nature, almost all thorium is thorium-232, although several additional isotopes can be present in small amounts. (Isotopes are different forms of an element that have the same number of protons in the nucleus but a different number of neutrons.) Thorium is a soft, ductile metal that is pyrophoric in powdered form. When heated in air, thorium turnings ignite and burn brilliantly with a white light.

Of the 26 known isotopes of thorium, only 12 have half-lives greater than one second, and of these only 3 have half-lives sufficiently long to warrant a concern. These key isotopes decay very slowly by emitting an alpha particle. The half-lives of thorium-232 and thorium-230, the isotopes of most concern, are very long. Their low specific activity means these two isotopes are not highly radioactive. Both thorium-232 and thorium-230 are present in soil and ores in secular equilibrium with radium-228 and radium-226, respectively. The health risks for these two radium isotopes (shown in the Radium fact sheet) must be added to those shown here to estimate the total risk. Thorium-229 is not generally associated with nuclear fuel cycle activities previously performed by the Department of Energy (DOE), and hence is not a radionuclide of concern at DOE environmental management sites. The health risks associated with thorium-228, which has a half-life of 1.9 years, are commonly included with those for radium-228 because thorium-228 cannot persist for an extended period of time in the absence of radium-228. *(See the companion fact sheet for Radium.)*

Radioactive Properties of Key Thorium Isotopes and Associated Radionuclides

Isotope	Half-Life	Natural Abundance (%)	Specific Activity (Ci/g)	Decay Mode	Radiation Energy (MeV)		
					Alpha (α)	Beta (β)	Gamma (γ)
Th-232	14 billion yr	>99	0.00000011	α	4.0	0.012	0.0013
Th-230	77,000 yr	<<1	0.020	α	4.7	0.015	0.0016
Th-229	7,300 yr	<<1	0.22	α	4.9	0.12	0.096
Ra-225	*15 days*		*40,000*	*β*	-	*0.11*	*0.014*
Ac-225	*10 days*		*59,000*	*α*	*5.8*	*0.022*	*0.018*
Fr-221	*4.8 min*		*180 million*	*α*	*6.3*	*0.010*	*0.031*
At-217	*0.032 sec*		*1.6 trillion*	*α*	*7.1*	<	<
Bi-213	*46 min*		*20 million*	*α, β*	*0.13*	*0.44*	*0.13*
Po-213 (98%)	*0.0000042 sec*		*13,000 trillion*	*α*	*8.4*	-	-
Tl-209 (2%)	*2.2 min*		*410 million*	*β*	-	*0.69*	*2.0*
Pb-209	*3.3 hr*		*4.7 million*	*β*	-	*0.20*	-

Ci = curie, g = gram, and MeV = million electron volts; a dash means the entry is not applicable, and a "<" means the radiation energy is less than 0.001 MeV. (See the companion fact sheet on Radioactive Properties, Internal Distribution, and Risk Coefficients for explanation of terms and interpretation of radiation energies.) Bismuth-213 decays by both emitting an alpha particle (2%) and a beta particle (98%). Certain properties of additional radionuclides are included here because they accompany the thorium decays. Values are given to two significant figures.

Where Does It Come From? Thorium is widely distributed in small amounts in the earth's crust. The chief commercial source is monazite sands in the United States (in North Carolina, South Carolina, Idaho, Colorado, Montana, and Florida) as well as in Brazil, India, Australia, and South Africa. The concentration of thorium oxide in monazite sands is about 3 to 10%. Thorium is also found in the minerals thorite (thorium silicate) and thorianite (mixed thorium and uranium oxides). The isotope thorium-230, a decay product of uranium-238, is found in uranium deposits as well as in uranium mill tailings.

How Is It Used? The principal use of thorium has been in the preparation of the Welsbach mantle for portable gas lanterns. These mantles contain thorium oxide with about 1% cerium oxide and other ingredients, and they glow with a dazzling light when heated in a gas flame. Thorium is an important alloying element in magnesium and is used to coat tungsten wire for components of electronic equipment. Thorium can also be added to ceramic items such as crucibles to make them more heat resistant, as well as to refractive glass to allow for smaller and more accurate camera lenses. In

Site-Specific Health and Safety Plan Acknowledgment

I have read this Site-Specific Health and Safety Plan, I understand the contents, and I agree to abide by its requirements I also have been properly trained, medically monitored, and fit tested for the work that I am to perform and those dates are provided below. Documentation will be placed in the Project Records.

Date	Name (Printed)	Signature	Company Represented	40-hr Date	8-hr Date*	Medical Date	Fit Test Date
7-26-04	Richard Kowitz	Richard Kowitz	N.W.T	1994	2004	3-22-04	2004
7-26-04	Alan M Campbell	Alan M Campbell	NWT	4-9-02	2004	5-6-04	2004
7/26/04	Ken Bradley	Ken Bradley	NWT	11/94	05/04	01/04	05/04
7/26/04	Dan Spurr	Dan Spurr	NWT	3/92	01/04	02/04	2004

*If 40-hr training is less than one year old, then the 8-hr refresher training is not required. Indicate this with NR

STATEMENT OF CERTIFICATION

We Certify that the instrument listed above was calibrated and inspected prior to shipment and that it met all the Manufacturers published operating specifications. We further certify that our Calibration Measurements are traceable to the National Institute of Standards and Technology. (We are not responsible for damage incurred during shipment or use of this instrument).

DETECTOR SETUP CHECK LIST REPORT

he following list is stored as detector setup D1 in the Model 2350.
oday's date is 05/03/2004.
he current time of day is: 08:57:11.

. have verified the list below
as NO discrepancies with the DETECTOR SETTINGS TABLE: M.C.

Comments:

Model 2350 Serial # =	134743.
User I.D. =	
High Voltage =	1000 volts.
Threshold =	100.
Window =	1000,Off.
Overload Current =	40.0 micro amperes.
Scaler Count Time =	12 seconds.
Readout Units =	R.
Readout Time Base =	hr.
Readout Range Multiplier =	auto.
Detector Dead Time =	1.116440E-05.
Detector Calibration Constant =	5.094543E+10.
Detector Model =	LMI44-10.
Detector Serial # =	PR685492.
Ratemeter Alarm Setting =	1.000000E+09.
Scaler Alarm Setting =	1000000.
Integrated Dose Alarm Setting =	1.000000E+09.
Low Count Alarm Setting =	X.
Operating Battery Voltage =	6.1 volts.

DETECTOR SETUP CHECK LIST REPORT

he following list is stored as detector setup D2 in the Model 2350.
oday's date is 05/03/2004.
he current time of day is: 08:57:34.

have verified the list below
as NO discrepancies with the DETECTOR SETTINGS TABLE: M.C.

omments:

Model 2350 Serial # =	134743.
User I.D. =	
High Voltage =	1000 volts.
Threshold =	100.
Window =	1000,Off.
Overload Current =	40.0 micro amperes.
Scaler Count Time =	12 seconds.
Readout Units =	counts.
Readout Time Base =	min.
Readout Range Multiplier =	auto.
Detector Dead Time =	1.116440E-05.
Detector Calibration Constant =	1.000000E+00.
Detector Model =	LMI44-10.
Detector Serial # =	PR685492.

CERTIFICATE OF CALIBRATION
ALPHA STANDARD SOURCE

Radionuclide:	Th-230	**Customer:**	NEW WORLD TECHNOLOGY			
Half-life:	(7.54 ± 0.03)E+04 years	**P.O. No.:**	20400			
Catalog No.:	LDS-230-100MM	**Reference Date:**	1-Sep-02	12:00	PST	
Source No.:	A7-267	**Contained Radioactivity:**	41.05	**nCi**	1519	**Bq**
		Contained Radioactivity: (Total Alpha)	91120	**dpm**		

Physical description:

A. Capsule type:	LDS (12.1 cm x 12.1 cm)
B. Nature of active deposit:	Electroplated and diffusion bonded oxide
C. Active Diameter:	10 cm x 10 cm
D. Backing:	Stainless steel
E. Cover:	None

Radioimpurities:

Ra-226 = 0.400% and Am-241 = 0.110% on 1 Sep 02.

CAUTION!
DELICATE SURFACE
DO NOT WIPE
ACTIVE AREA

Method of Calibration:

This source was assayed using a windowless internal gas flow proportional counter.

Uncertainty of Measurement:

A. Type A (random) uncertainty:	± 0.5 %
B. Type B (systematic) uncertainty:	± 3.0 %
C. Uncertainty in aliquot weighing:	± 0.0 %
D. Total uncertainty at the 99% confidence level:	± 3.0 %

Notes:

- See reverse side for leak test(s) performed on this source.
- IPL participates in a NIST measurement assurance program to establish and maintain implicit traceability for a number of nuclides, based on the blind assay (and later NIST certification) of Standard Reference Materials (As in NRC Regulatory Guide 4.15).
- Nuclear data was taken from "Table of Radioactive Isotopes", edited by Virginia Shirley, 1986.
- This source has a working life of 2 years.
- This source had a total alpha surface emission rate of 43740 α/min in 2π on 20 Aug 02.

CERTIFICATE OF GAMMA STANDARD SOURCE

Radionuclide: Cs-137 Half-life: 30.174 ± 0.034 Y

Customer: SAFETY SPECIALIST INC P.O. No.: 8036

Catalog No.: 290 M Source No.: 173-6-18 Reference Date: JAN 1, 1988

Contained Radioactivity: 1.116 μCi

Description of Source

a. Capsule type: M

b. Nature of active deposit: EVAPORATED METALLIC SALTS

c. Active diameter: 3 mm

d. Backing: 9.23 mg/cm² KAPTON

e. Cover: 0.01" MYLAR

Radioimpurities

NONE DETECTED

Method of Calibration

(✓) The source was assayed by gamma spectrometry, integrating under the 0.662 Mev peak(s). The branching ratio(s) used was/~~were~~ 0.85 gamma rays per decay.

( ) The source was prepared from a weight aliquot of solution whose activity in uCi/gram was determined by the method above.

Uncertainty of Measurement

a. Systematic uncertainty in instrument calibration: ± 1.4 %

b. Random uncertainty

1. In assay: ± 1.1 %
2. In weighing(s): ± _____ %

c. Total Uncertainty: ± 2.5 % at the 99% confidence level.

NBS Traceability

This calibration is implicitly traceable to the National Bureau of Standards.

Notes

1. Nuclear data were taken from "Table of Isotopes", Seventh Edition, edited by C. Michael Lederer et al.
2. IPL participates in an NBS measurement assurance program to establish and maintain implicit traceability for a number of nuclides, based on the blind assay (and later NBS certification) of Standard Reference Materials. (As in NRC Regulatory Guide 4.15)

LUDLUM MODEL 2929
DAILY 10 MINUTE BACKGROUND AND EFFICIENCY

For:	July, August	2004						
Instrument ID:	171594					Detector ID:	179307	
Cal Due Date:	7/21/2005							
Sources Used:			Alpha S/N:	Th-230 A7-271		Activity:	100,600	DPM
			Beta S/N:	Tc-99 A7-272		Activity:	112,500	DPM
			Acceptable Range of Background:		0	CPM to	1.6	CPM α
Background Count Time:	10	Minutes			38.6	CPM to	65.2	CPM βγ

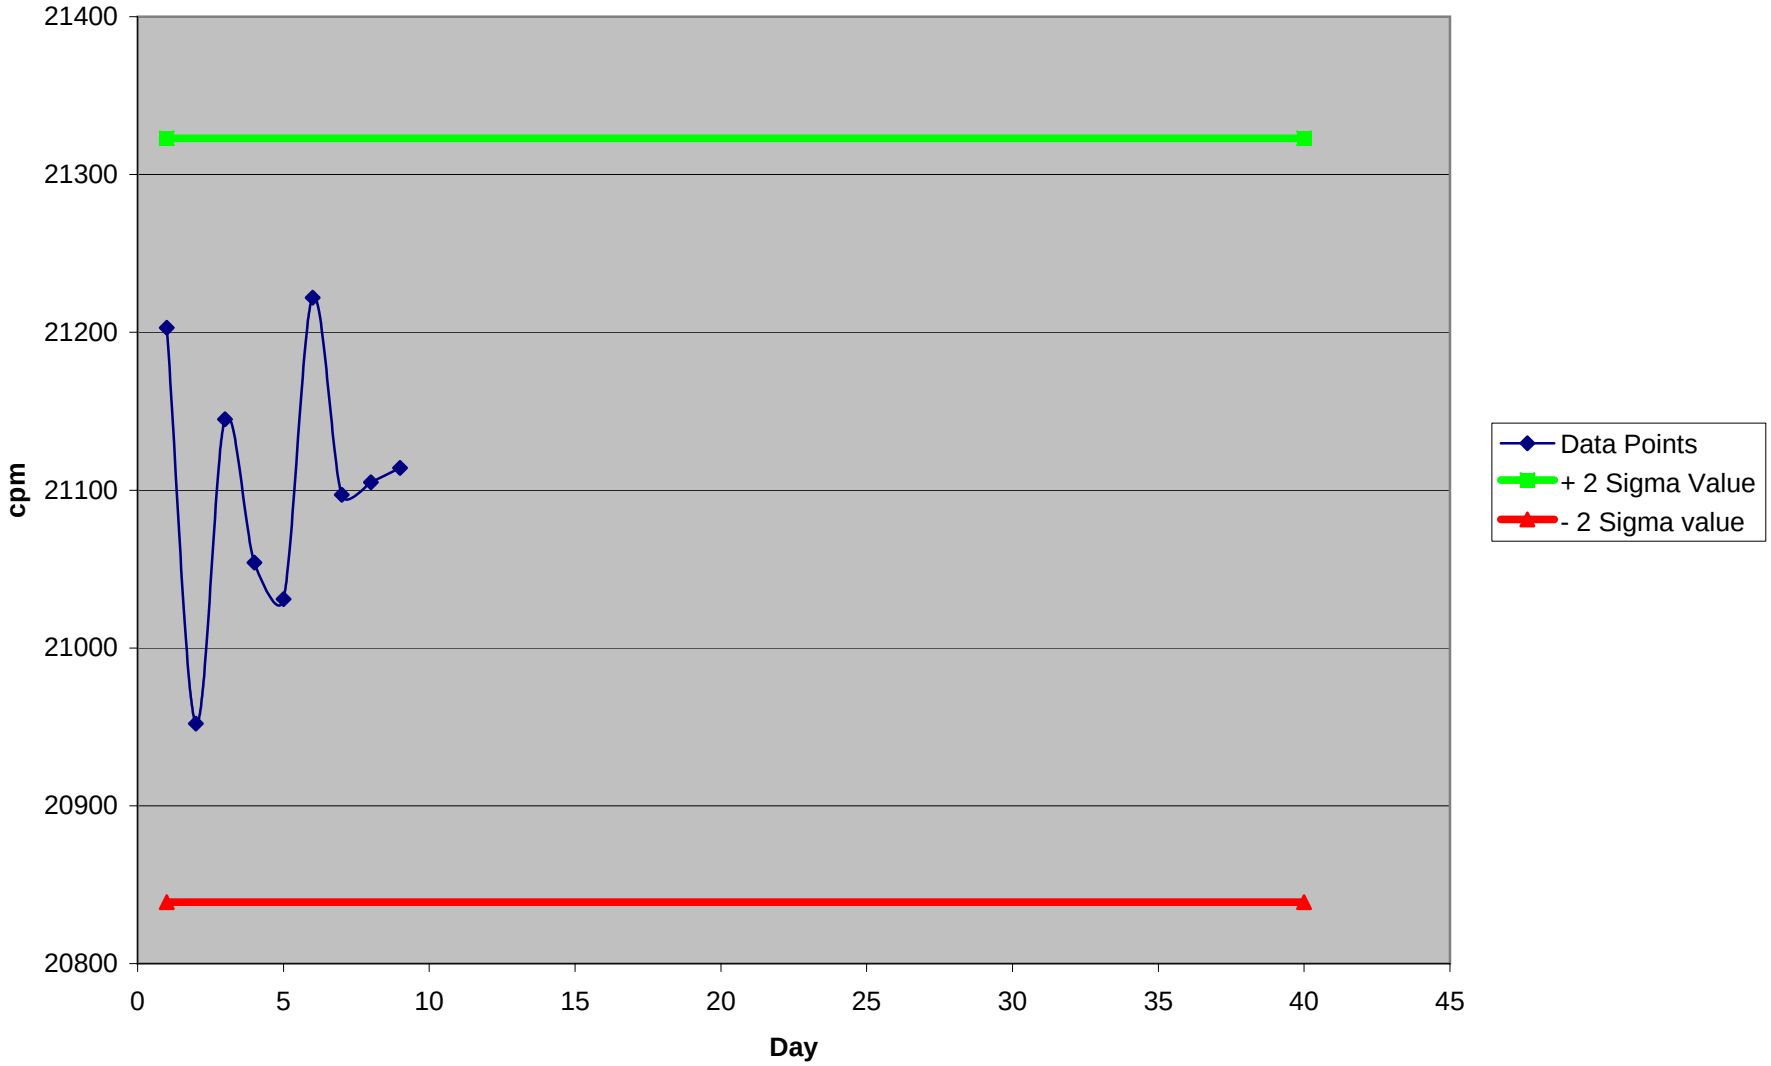

Date	Total Counts α	Total Counts βγ	10-Minute Background (CPM) α	10-Minute Background (CPM) βγ	1-min α Source Counts	Eff. α	1- min βγ Source Counts	Eff. βγ	Initials

☐ Radioactive Material, excepted package-empty package	7	UN2910
☐ Radioactive Material, excepted package, articles manufactured from depleted Uranium	7	UN2910
☐ Radioactive Material, excepted package, articles manufactured from natural Thorium	7	UN2910
☐ Radioactive Material, excepted package, articles manufactured from natural Uranium	7	UN2910
☐ Radioactive Material, excepted package-instruments or articles	7	UN2910
☐ Radioactive Material, excepted package-limited quantity of material	7	UN2910
☒ US DOT EXEMPT	NA	NA

POTENTIAL HAZARDS

HEALTH

- Radiation presents minimal risk to transport workers, emergency response personnel, and the public during transportation accidents. Packaging durability is related to potential hazards of material.
- Low-level radioactive material; very low radiation hazard to people.
- Some radioactive materials cannot be detected by commonly available instruments.
- Quantity of material presents low radiation hazard if released from package during accident.
- Packages do not have RADIOACTIVE I, II or III labels. Some may have EMPTY labels or may have the word "RADIOACTIVE" in the package marking.
- If any radioactive contamination occurs, it will be extremely low level.

FIRE OR EXPLOSION

- Some of these materials may burn, but none of them ignites readily.
- Radioactivity does not change flammability or other properties of the materials.

PUBLIC SAFETY

- **Call Thom Dias (925) 443-7967.**
- Priorities for rescue, life-saving, first-aid, and control of fire and other hazards are higher than the priority for measuring radiation levels.
- Radiation authority must be notified of accident conditions, and is usually responsible for radiological decisions.
- Isolate spill or leak area immediately for at least 25 to 50 meters (80 to 160 feet) in all directions.
- Stay upwind.
- Keep unauthorized personnel away.
- Detain or isolate uninjured persons or equipment suspected to be contaminated; delay decontamination and cleanup until instructions are received from Radiation Authority.

PROTECTIVE CLOTHING

- Positive pressure self-contained breathing apparatus (SCBA) and structural firefighters' protective clothing will provide adequate protection.

EVACUATION

Large Spill

- Consider initial downwind evacuation for at least 100 meters (330 feet).

Fire

- When a large quantity of this material is involved in a major fire, consider an initial evacuation distance of 300 meters (1000 feet) in all directions.

EMERGENCY RESPONSE

FIRE

- Presence of radioactive material will not change effectiveness of fire control techniques.
- Move containers from fire area if you can do it without risk.
- Do not move damaged packages; move undamaged containers out of fire zone.

Small Fires

- Dry chemicals, CO2, Water spray or regular foam.

Large Fires

- Water spray, fog (flooding amounts).

SPILL OR LEAK

- Do not touch damaged packages or spilled material.

Liquid Spills

- Cover with sand, earth or other non-combustible absorbent material.
- Cover powder spill with plastic sheet or tarp to minimize spreading.

FIRST AID

- Medical problems take priority over radiological concerns.
- Use first aid treatment according to the degree of the injury.
- Do not delay care and transport of a seriously injured person.
- Apply artificial respiration if victim is not breathing.
- Administer oxygen if breathing is difficult.
- In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes.
- Injured persons who contacted released material may be a minor contamination problem to contacted persons, equipment and facilities.
- Ensure that medical personnel are aware of the material(s) involved, and take precautions to protect themselves.

The above information is intended to satisfy the requirements of 49 CFR parts 172.600, 172.602 & 172.604.

NWT
EMERGENCY PROCEDURES

New World Technology
448 Commerce Way
Livermore CA 94550

**** 24 Hour Emergency Contact**
Willie Bremer (925) 443-7967

EMERGENCY PROCEDURE TO BE FOLLOWED BY VEHICLE DRIVER IN THE EVENT OF AN ACCIDENT:

1. Perform lifesaving rescue and emergency first aid. Delay other first aid care until victims can be removed from the vicinity of any potentially hazardous material. Notify receiving medical facilities of possible contamination or radiation exposure of the injured.
2. Establish a control zone. The perimeter of this zone will be determined by the accident scene conditions. If there is no release of radioactive material, a distance of 20 feet is required. If the containers are breached and dispersal is a potential, increase the control zone as large as possible.
    A. Limit time near radioactive shipping packages as much as possible.
    B. Cover spilled radioactive material with plastic sheeting or tarps to prevent or limit dispersal.
    C. Avoid direct contact with radioactive material. Utilize protective clothing and utilize anything available for remote handling.
3. Detain personnel in the immediate area and items with possible contamination until they can be monitored for radioactive contamination.
4. **If there is a fire**, advise individuals and emergency responders that everyone should move upwind, Use respirators if you need to enter the area. Inform the fire department that the truck is carrying radioactive materials.
5. The following persons are to be notified in the sequence shown below:
    A. Willie Bremer, Director of Brokerage Operations, Livermore, CA
        Day: (925) 443-7967
        Night: (209) 543-0969
        Cell: (925) 209-3887
    B. Additional 24-Hour Emergency Contact: Don Wadsworth, Livermore, CA
        Day: (925) 443-7967
        Night: (925) 443-7982
        Cell: (925) 997-7941
    C. Notify the state and local emergency responders by dialing 911 in the event the emergency contacts above cannot be reached or if there is a serious threat to life or property.
    D. For general information on the chemicals identified in the accident call CHEMTREC at (800) 424-9300.

Re: Paragon Workorder: 04-08-001
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Sixteen soil samples were received from New World Technology on August 2, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-259) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWT Workorder No: 0408001

Project Manager: LRS Initials: GL Date: 8/2/04

1. Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2. Is **pre-screening** required per SOP 008?		YES	(NO)
3. Are custody **seals** on **shipping containers** intact?	N/A	(YES)	NO
4. Are custody **seals** on **sample containers** intact?	(N/A)	YES	NO
5. Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
6. Is the **COC** (if applicable) **complete and legible**?	N/A	(YES)	NO
7. Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	(YES)	NO
8. Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	(YES)	NO
9. Were **airbills** present and/or removable?	N/A	YES	NO
10. Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	(N/A)	YES	NO
11. Are all aqueous **non-preserved samples** at the **correct pH**?	(N/A)	YES	NO
12. Is there **sufficient sample** for the requested analyses?		(YES)	NO
13. Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
14. Are all samples within **holding times** for the requested analyses?		(YES)	NO
15. Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	(NO)
16. Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	(N/A)	YES	NO
17. Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
18. Were the sample(s) **shipped on ice**?	(N/A)	YES	NO
19. Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** #1 #2	(N/A)	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403

*IR Gun #2: Oakton, SN 2SCIR1201

Cooler #'s 1

Temperature Amb.

No. of custody seals 1

DOT Survey/ Acceptance Information

External µR/hr reading 15

Background µR/hr reading 15

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? (YES) / NO (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

- Multiple samples received w/ mud on outside of containers
- Samples 7 & 15 were received w/ lids open RBS-7,15
- Sample 15 has small crack in lid.
- Unable to determine if cross-contamination from above problems.

Per Erin 8/3, only minor losses from these jars. Proceed.

If applicable, was the client contacted? YES / NO / NA Contact Name: D. Spruzen Date/Time: 8/3 11:56

Project Manager Signature/ Date: 8/3/04

Paragon Work Order 0408001

1. This report consists of analysis results for sixteen soil samples received by Paragon Analytics on 8/2/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 8/17/04.

4. Sample volumes were insufficient to allow preparation of duplicates. Duplicate analyses of samples RBS-2 and RBS-10 (PA ID 0408001-2 and -10) were performed in lieu of prepared duplicates.

5. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this workorder. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

6. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

7. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

8. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a

reported value of 0 for samples with significant activity, including the batch laboratory control sample.

9. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

10. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Radiochemistry Instrument Technician — Date: 8-30-04

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

13982-39-3	Zn-65	-0.31 +/- 0.20	0.42	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
LT - Result is less than Requested MDC, greater than sample specific MDC.
M - The requested MDC was not met.
M3 - The requested MDC was not met, but thereported activity is greater than the reported MDC.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:
TPU - Total Propagated Uncertainty (see PAI SOP 743)
MDC - Minimum Detectable Concentration (see PAI SOP 709)
BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-002
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Sixteen soil samples were received from New World Technology on August 2, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-280) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWT Workorder No: 0408002

Project Manager: LRS Initials: GL Date: 8/2/04

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2.	Is **pre-screening** required per SOP 008?		YES	(NO)
3.	Are custody **seals** on **shipping containers** intact?	N/A	(YES)	NO
4.	Are custody **seals** on **sample containers** intact?	(N/A)	YES	NO
5.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
6.	Is the **COC** (if applicable) **complete and legible**?	N/A	(YES)	NO
7.	Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	(YES)	NO
8.	Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	(YES)	NO
9.	Were **airbills** present and/or removable?	N/A	YES	NO
10.	Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	(N/A)	YES	NO
11.	Are all aqueous **non-preserved samples** at the **correct pH**?	(N/A)	YES	NO
12.	Is there **sufficient sample** for the requested analyses?		(YES)	NO
13.	Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
14.	Are all samples within **holding times** for the requested analyses?		(YES)	NO
15.	Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	(NO)
16.	Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble:** ____ < green pea ____ > green pea	(N/A)	YES	NO
17.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
18.	Were the sample(s) **shipped on ice**?	(N/A)	YES	NO
19.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** #1 #2	(N/A)	YES	NO

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408002

1. This report consists of analysis results for sixteen soil samples received by Paragon Analytics on 8/2/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 8/17/04.

4. Sample volumes were insufficient to allow preparation of duplicates. Duplicate analyses of samples RBS-17 and RBS-19 (PA ID 0408002-1 and -3) were performed in lieu of prepared duplicates.

5. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this workorder. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

6. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

7. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

8. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a

reported value of 0 for samples with significant activity, including the batch laboratory control sample.

9. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

10. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

13982-39-3	Zn-65	0.034 +/- 0.078	0.142	U

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU
Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.
Y2 - Chemical Yield outside default limits.
LT - Result is less than Requested MDC, greater than sample specific MDC.
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
M - Requested MDC not met.
B - Analyte concentration greater than MDC.
B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
MDC - Minimum Detectable Concentration (see PAI SOP 709)
BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

LT - Result is less than Requested MDC, greater than sample specific MDC.

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

L - LCS Recovery below lower control limit.

H - LCS Recovery above upper control limit.

P - LCS Recovery within control limits.

M - The requested MDC was not met.

M3 - The requested MDC was not met, but thereported activity is greater than the reported MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

15117-96-1	U-235	0.19 +/- 0.39	0 +/- 0.27	0.40	2.13	U,G
13982-39-3	Zn-65	0.03 +/- 0.19	0.06 +/- 0.32	0.07	2.13	U,G

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

13967-48-1	Ru-106	-0.13 +/- 0.64	1.20	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-106
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 12, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-326) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere

Paragon Analytics

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: New World Workorder No: 0408106

Project Manager: CRS Initials: MW Date: 8/12/04

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2.	Is **pre-screening** required per SOP 008?		YES	(NO)
3.	Are custody **seals** on **shipping containers** intact?	N/A	(YES)	NO
4.	Are custody **seals** on **sample containers** intact?	(N/A)	YES	NO
5.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
6.	Is the **COC** (if applicable) **complete and legible**?	N/A	(YES)	NO
7.	Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	(YES)	NO
8.	Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	(YES)	NO
9.	Were **airbills** present and/or removable?	N/A	(YES)	NO
10.	Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	(N/A)	YES	NO
11.	Are all aqueous **non-preserved samples** at the **correct pH**?	(N/A)	YES	NO
12.	Is there **sufficient sample** for the requested analyses?		(YES)	NO
13.	Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
14.	Are all samples within **holding times** for the requested analyses?		(YES)	NO
15.	Were all sample containers received **intact**? (not broken or leaking, etc.)		(YES)	NO
16.	Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	(N/A)	YES	NO
17.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
18.	Were the sample(s) **shipped on ice**?	(N/A)	YES	NO
19.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** **#1** **#2**	(N/A)	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1						
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	Ambient						
	No. of custody seals	1						
DOT Survey/ Acceptance Information	External µR/hr reading	17						
	Background µR/hr reading	12						

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? (YES) / NO (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES / NO / (N/A)** Contact Name:_____ Date/Time:_____

Project Manager Signature/ Date: MW 8/13/04

Paragon Analytics

Radiochemistry Case Narrative
Gamma Spectroscopy

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408106

1. This report consists of analysis results for twenty soil samples received by Paragon Analytics on 8/12/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 8/30/04.

4. Sample volumes were insufficient to allow preparation of duplicates. A duplicate analysis of samples RR-1 and RR-11 (PA ID's 0408106-1 and -11) were performed in lieu of prepared duplicates.

5. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

6. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

7. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this workorder. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

8. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a

reported value of 0 for samples with significant activity, including the batch laboratory control sample.

9. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

10. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

13982-39-3	Zn-65	-0.04 +/- 0.20	0.38	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

13967-48-1	Ru-106	-0.64 +/- 0.97	1.90	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Data Package ID: *GSS0408106-1*

Re: Paragon Workorder: 04-08-107
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Ten soil samples were received from New World Technology on August 12, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-213) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: New World Workorder No: 0408107

Project Manager: LRS Initials: MW Date: 8/12/04

1. Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2. Is **pre-screening** required per SOP 008?		YES	(NO)
3. Are custody **seals** on **shipping containers** intact?	N/A	(YES)	NO
4. Are custody **seals** on **sample containers** intact?	(N/A)	YES	NO
5. Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
6. Is the **COC** (if applicable) **complete and legible**?	N/A	(YES)	NO
7. Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	(YES)	NO
8. Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	(YES)	NO
9. Were **airbills** present and/or removable?	N/A	(YES)	NO
10. Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	(N/A)	YES	NO
11. Are all aqueous **non-preserved samples** at the **correct pH**?	(N/A)	YES	NO
12. Is there **sufficient sample** for the requested analyses?		(YES)	NO
13. Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
14. Are all samples within **holding times** for the requested analyses?		(YES)	NO
15. Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	(NO)
16. Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	(N/A)	YES	NO
17. Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
18. Were the sample(s) **shipped on ice**?	(N/A)	YES	NO
19. Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*: #1 #2**	(N/A)	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1						
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	Amb. Tk						
	No. of custody seals	1						
DOT Survey/ Acceptance Information	External µR/hr reading	17						
	Background µR/hr reading	12						

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? (YES) / NO (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

- Sample 3 received w/o lid, on security aw 8.12.04. Some sample lost but believe integrity remains uncompromised.

Noted

If applicable, was the client contacted? YES / (NO) / NA Contact Name: _____ Date/Time: _____

Radiochemistry Case Narrative
Gamma Spectroscopy

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408107

1. This report consists of analysis results for ten soil samples received by Paragon Analytics on 8/12/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 9/2/04.

4. Sample volumes were insufficient to allow preparation of a duplicate. A duplicate analysis of sample RR-21 (PA ID 0408107-1) was performed in lieu of prepared duplicates.

5. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

6. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

7. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this workorder. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

8. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

9. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
LT - Result is less than Requested MDC, greater than sample specific MDC.
M - The requested MDC was not met.
M3 - The requested MDC was not met, but thereported activity is greater than the reported MDC.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:
TPU - Total Propagated Uncertainty (see PAI SOP 743)
MDC - Minimum Detectable Concentration (see PAI SOP 709)
BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-122
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 13, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-333) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWT Workorder No: 0408122

Project Manager: LS Initials: CLO Date: 8/13/04

1. Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2. Is **pre-screening** required per SOP 008?		YES	(NO)
3. Are custody **seals** on **shipping containers** intact?	N/A	(YES)	NO
4. Are custody **seals** on **sample containers** intact?	(N/A)	YES	NO
5. Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
6. Is the **COC** (if applicable) **complete and legible**?	N/A	(YES)	NO
7. Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	(YES)	NO
8. Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	(YES)	NO
9. Were **airbills** present and/or removable?	N/A	(YES)	NO
10. Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	(N/A)	YES	NO
11. Are all aqueous **non-preserved samples** at the **correct pH**?	(N/A)	YES	NO
12. Is there **sufficient sample** for the requested analyses?		(YES)	NO
13. Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
14. Are all samples within **holding times** for the requested analyses?		(YES)	NO
15. Were all sample containers received **intact**? (not broken or leaking, etc.)		(YES)	NO
16. Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	(N/A)	YES	NO
17. Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
18. Were the sample(s) **shipped on ice**?	(N/A)	YES	NO
19. Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** **#1** **#2**	(N/A)	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1						
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	4M3						
	No. of custody seals	1						
DOT Survey/ Acceptance Information	External µR/hr reading	17						
	Background µR/hr reading	17						

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **YES / NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES / NO / NA** Contact Name:_____ Date/Time:_____

Project Manager Signature/ Date: 8/16/04

Gamma Spectroscopy

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408122

1. This report consists of analysis results for 20 soil samples received by Paragon Analytics on 08/13/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 09/14/04.

4. Sample volumes were insufficient to allow preparation of a duplicate. Duplicate analyses of samples SU2-A1 and SU2-C5 (PA ID's 0408122-1 and -10) were performed in lieu of a prepared duplicate.

5. Duplicate analysis results above the DER warning limit of 1.42 have been flagged as "W" for Warn. For gamma spectroscopic analysis, SOP 715R13 states that 75% of the nuclides must be within the 2-sigma control limit to meet DER requirements. Elevated DER values may be attributable to sample inhomogeneity.

6. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

7. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

8. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this workorder. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

9. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a reported value of 0 for samples with significant activity, including the batch laboratory control sample.

10. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

11. No further problems were encountered with either the client samples or the associated quality control samples. All remaining quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU
Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.
Y2 - Chemical Yield outside default limits.
LT - Result is less than Requested MDC, greater than sample specific MDC.
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
M - Requested MDC not met.
B - Analyte concentration greater than MDC.
B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
MDC - Minimum Detectable Concentration (see PAI SOP 709)
BDL - Below Detection Limit

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
LT - Result is less than Requested MDC, greater than sample specific MDC.
M - The requested MDC was not met.
M3 - The requested MDC was not met, but thereported activity is greater than the reported MDC.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:
TPU - Total Propagated Uncertainty (see PAI SOP 743)
MDC - Minimum Detectable Concentration (see PAI SOP 709)
BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

13982-39-3	Zn-65	0 +/- 0.23	0.43	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-123
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 13, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-348) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWT Workorder No: 0408123

Project Manager: LS Initials: CMC Date: 8/13/04 8-13-04

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2.	Is **pre-screening** required per SOP 008?		(YES)	NO
3.	Are custody **seals** on **shipping containers** intact?	N/A	(YES)	NO
4.	Are custody **seals** on **sample containers** intact?	(N/A)	YES	NO
5.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
6.	Is the **COC** (if applicable) **complete and legible**?	N/A	(YES)	NO
7.	Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	(YES)	NO
8.	Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	(YES)	NO
9.	Were **airbills** present and/or removable?	N/A	(YES)	NO
10.	Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	(N/A)	YES	NO
11.	Are all aqueous **non-preserved samples** at the **correct pH**?	(N/A)	YES	NO
12.	Is there **sufficient sample** for the requested analyses?		(YES)	NO
13.	Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
14.	Are all samples within **holding times** for the requested analyses?		(YES)	NO
15.	Were all sample containers received **intact**? (not broken or leaking, etc.)		(YES)	NO
16.	Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	(N/A)	YES	NO
17.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
18.	Were the sample(s) **shipped on ice**?	(N/A)	YES	NO
19.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** **#1** **#2**	(N/A)	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1							
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	NA							
	No. of custody seals	1							
DOT Survey/ Acceptance Information	External µR/hr reading	17							
	Background µR/hr reading	14							

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **(YES) / NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES / NO / (N/A)** Contact Name:_____ Date/Time:_____

Radiochemistry Case Narrative
Gamma Spectroscopy

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408123

1. This report consists of analysis results for 20 soil samples received by Paragon Analytics on 08/13/2004. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 09/15/2004.

4. Sample volumes were insufficient to allow preparation of duplicates. Duplicate analyses of samples SU1-A1 and BO (PA ID 0408123-2 and 12) were performed in lieu of prepared duplicates.

5. Duplicate analysis results above the DER warning limit of 1.42 have been flagged as "W" for Warn. For gamma spectroscopic analysis, SOP 715R13 states that 75% of the nuclides must be within the 2-sigma control limit to meet DER requirements. Elevated DER values may be attributable to sample inhomogeneity.

6. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

7. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

8. Due to elevated activity and subsequent elevated background from the Compton Continuum in sample SU1-A0 (PA ID 0408123-1) the requested MDC of 1.0 pCi/gram for Ac-228 was not met. As there is significant activity in this sample, results are reported without further qualification.

9. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be

rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a reported value of 0 for samples with significant activity, including the batch laboratory control sample.

10. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this workorder. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

11. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

12. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Run ID: GS040828-2A
Count Time: 30 minutes
Report Basis: Dry Weight

Final Aliquot: 240 g
Prep Basis: Dry Weight
Moisture(%): NA
Result Units: pCi/g
File Name: 041560D08A

CASNO	Target Nuclide	Result +/- 2 s TPU	MDC	Lab Qualifier
14683-10-4	Sb-124	-0.04 +/- 0.14	0.26	U,G
14234-35-6	Sb-125	0.10 +/- 0.20	0.35	U,G
13967-63-0	Sc-46	0.01 +/- 0.12	0.22	U,G
15623-47-9	Th-227	-0.28 +/- 0.72	1.31	U,G
15065-10-8	Th-234	1.8 +/- 1.0	2.1	U,G
14913-50-9	Tl-208	0.45 +/- 0.15	0.16	G
15117-96-1	U-235	0.04 +/- 0.43	0.75	U,G
13982-39-3	Zn-65	-0.11 +/- 0.32	0.62	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

13967-48-1	Ru-106	0.03 +/- 0.59	1.12	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-124
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 13, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-330) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWT Workorder No: 0408124

Project Manager: LS Initials: CW Date: 8-13-04

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	NO
2.	Is **pre-screening** required per SOP 008?		YES	NO
3.	Are custody **seals** on **shipping containers** intact?	N/A	YES	NO
4.	Are custody **seals** on **sample containers** intact?	N/A	YES	NO
5.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		YES	NO
6.	Is the **COC** (if applicable) **complete and legible**?	N/A	YES	NO
7.	Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	YES	NO
8.	Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	YES	NO
9.	Were **airbills** present and/or removable?	N/A	YES	NO
10.	Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	N/A	YES	NO
11.	Are all aqueous **non-preserved samples** at the **correct pH**?	N/A	YES	NO
12.	Is there **sufficient sample** for the requested analyses?		YES	NO
13.	Were all samples placed in the **proper containers** for the requested analyses?		YES	NO
14.	Are all samples within **holding times** for the requested analyses?		YES	NO
15.	Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	NO
16.	Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	N/A	YES	NO
17.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	N/A	YES	NO
18.	Were the sample(s) **shipped on ice**?	N/A	YES	NO
19.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** #1 #2	N/A	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1	2						
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	NA	NA						
	No. of custody seals	1	1						
DOT Survey/ Acceptance Information	External µR/hr reading	17	17						
	Background µR/hr reading	14							

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **YES** / **NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES** / **NO** / NA Contact Name:_____ Date/Time:_____

Paragon Analytics

Radiochemistry Case Narrative
Gamma Spectroscopy

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408124

1. This report consists of analysis results for twenty soil samples received by Paragon Analytics on 8/13/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 9/15/04.

4. Sample volumes were insufficient to allow preparation of duplicates. A duplicate analysis of samples SU2-E3 and SU1-D3 (PA ID's 0408124-1 and -11) were performed in lieu of prepared duplicates.

5. Duplicate analysis results above the DER warning limit of 1.42 have been flagged as "W" for Warn. For gamma spectroscopic analysis, SOP 715R13 states that 75% of the nuclides must be within the 2-sigma control limit to meet DER requirements. Elevated DER values may be attributable to sample inhomogeneity.

6. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

7. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

8. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this workorder. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

9. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a reported value of 0 for samples with significant activity, including the batch laboratory control sample.

10. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

11. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-125
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 13, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-331) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWI Workorder No: 0408125

Project Manager: LS Initials: CAO Date: 8-13-04

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2.	Is **pre-screening** required per SOP 008?		YES	(NO)
3.	Are custody **seals** on **shipping containers** intact?	N/A	(YES)	NO
4.	Are custody **seals** on **sample containers** intact?	(N/A)	YES	NO
5.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		YES	NO
6.	Is the **COC** (if applicable) **complete and legible**?	N/A	(YES)	NO
7.	Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	YES	(NO)
8.	Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	(YES)	NO
9.	Were **airbills** present and/or removable?	N/A	(YES)	NO
10.	Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	(N/A)	YES	NO
11.	Are all aqueous **non-preserved samples** at the **correct pH**?	(N/A)	YES	NO
12.	Is there **sufficient sample** for the requested analyses?		(YES)	NO
13.	Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
14.	Are all samples within **holding times** for the requested analyses?		(YES)	NO
15.	Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	(NO)
16.	Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble:** ____ < green pea ____ > green pea	(N/A)	YES	NO
17.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
18.	Were the sample(s) **shipped on ice**?	(N/A)	YES	NO
19.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** #1 #2	(N/A)	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403

*IR Gun #2: Oakton. SN 2SCIR1201

Cooler #'s	1							
Temperature	N/A							
No. of custody seals	1							
DOT Survey/ Acceptance Information: External µR/hr reading	10							
DOT Survey/ Acceptance Information: Background µR/hr reading	14							

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **(YES) / NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

1.) COC states SV1-D2 Bottle states SV1-D0 - dates and Time match PA# 0408125-10

2.) SV2-H3 Bottle was Broken, PA# 0408125-16 Use bottle ID for

Per CAO: Mostly intact. No reason to suspect cross contamination. Transfered to bypass.

Project Manager Signature/ Date: 8/16/04

Paragon Analytics

Radiochemistry Case Narrative
Gamma Spectroscopy

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408125

1. This report consists of analysis results for 20 soil samples received by Paragon Analytics on 08/12/2004. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

2. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 09/13/2004.

3. Sample volumes were insufficient to allow preparation of duplicates. Duplicate analyses of samples RBS-27 and SUI-D0 (PA ID 0408125-1 and 10) were performed in lieu of prepared duplicates.

4. Due to an oversight, the 'Code' on the raw data for the duplicate of sample SU1-D0 (PA ID 0408125-10D) does not match the 'File Name' on the final report. The reported values on the final report are correct and match the values on the raw data. Data quality is not affected and results are reported without further qualification. Please refer to QASS 222766.

5. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

6. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

7. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this work order. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

8. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

9. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a reported value of 0 for samples with significant activity, including the batch laboratory control sample.

10. No further problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
LT - Result is less than Requested MDC, greater than sample specific MDC.
M - The requested MDC was not met.
M3 - The requested MDC was not met, but thereported activity is greater than the reported MDC.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-126
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Three soil samples were received from New World Technology on August 13, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-136) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWT Workorder No: 0408126

Project Manager: LS Initials: CMO Date: 8-13-04

1. Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2. Is **pre-screening** required per SOP 008?		YES	(NO)
3. Are custody **seals** on **shipping containers** intact?	(N/A)	(YES)	NO
4. Are custody **seals** on **sample containers** intact?	(N/A)	YES	NO
5. Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
6. Is the **COC** (if applicable) **complete and legible**?	N/A	(YES)	NO
7. Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	(YES)	NO
8. Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	(YES)	NO
9. Were **airbills** present and/or removable?	N/A	(YES)	NO
10. Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	(N/A)	YES	NO
11. Are all aqueous **non-preserved samples** at the **correct pH**?	(N/A)	YES	NO
12. Is there **sufficient sample** for the requested analyses?		(YES)	NO
13. Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
14. Are all samples within **holding times** for the requested analyses?		(YES)	NO
15. Were all sample containers received **intact**? (not broken or leaking, etc.)		(YES)	NO
16. Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	(N/A)	YES	NO
17. Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
18. Were the sample(s) **shipped on ice**?	(N/A)	YES	NO
19. Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** #1 #2	(N/A)	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1	2						
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	NA	(2)						
	No. of custody seals	1	1						
DOT Survey/ Acceptance Information	External µR/hr reading	17	16						
	Background µR/hr reading	14							

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **(YES) / NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES / NO / NA** Contact Name:_____ Date/Time:_____

Project Manager Signature/ Date: 8/16/04

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408126

1. This report consists of analysis results for 3 soil samples received by Paragon Analytics on 08/13/2004. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 09/03/2004.

4. Sample volumes were insufficient to allow preparation of a duplicate. A duplicate analysis of sample SU3-A3 (PA ID 0408126-1) was performed in lieu of a prepared duplicate.

5. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

6. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

7. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this workorder. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

8. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a reported value of 0 for samples with significant activity, including the batch laboratory control sample.

9. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

10. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
LT - Result is less than Requested MDC, greater than sample specific MDC.
M - The requested MDC was not met.
M3 - The requested MDC was not met, but thereported activity is greater than the reported MDC.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:
TPU - Total Propagated Uncertainty (see PAI SOP 743)
MDC - Minimum Detectable Concentration (see PAI SOP 709)
BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-167
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 18, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-314) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

Paragon Analytics

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: PWT Workorder No: 0408167

Project Manager: LS Initials: emc Date: 8-18-04

1. Does this project require any **special handling** in addition to standard Paragon procedures?		YES	NO
2. Is **pre-screening** required per SOP 008?		YES	NO
3. Are custody **seals** on **shipping containers** intact?	N/A	YES	NO
4. Are custody **seals** on **sample containers** intact?	N/A	YES	NO
5. Is there a **COC (Chain-of-Custody) present** or other representative documents?		YES	NO
6. Is the **COC** (if applicable) **complete and legible**?	N/A	YES	NO
7. Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	YES	NO
8. Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	YES	NO
9. Were **airbills** present and/or removable?	N/A	YES	NO
10. Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	N/A	YES	NO
11. Are all aqueous **non-preserved samples** at the **correct pH**?	N/A	YES	NO
12. Is there **sufficient sample** for the requested analyses?		YES	NO
13. Were all samples placed in the **proper containers** for the requested analyses?		YES	NO
14. Are all samples within **holding times** for the requested analyses?		YES	NO
15. Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	NO
16. Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	N/A	YES	NO
17. Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	N/A	YES	NO
18. Were the sample(s) **shipped on ice**?	N/A	YES	NO
19. Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** **#1** **#2**	N/A	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1						
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	W/I						
	No. of custody seals	1						
DOT Survey/ Acceptance Information	External µR/hr reading	16						
	Background µR/hr reading	13						

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **YES** / **NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES** / **NO** / **NA** Contact Name:_____ Date/Time:_____

Project Manager Signature/ Date: 8/20/04

Radiochemistry Case Narrative
Gamma Spectroscopy

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408167

1. This report consists of analysis results for 20 soil samples received by Paragon Analytics on 08/18/2004. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.
2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.
3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 09/17/2004.
4. Sample volumes were insufficient to allow preparation of duplicates. A duplicate analysis of samples SU4-D2 and SU4-A2 (PA ID 0408167-1 and 10) was performed in lieu of a prepared duplicate.
5. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.
6. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.
7. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a reported value of 0 for samples with significant activity, including the batch laboratory control sample.
8. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are

flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this workorder. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

9. Due to poor spectra quality, the Seeker Gamma Spectroscopic Software was unable to calculate values for the activity, 2-sigma total propagated uncertainty (T.P.U.), and the minimum detectable concentration (M.D.C.) for sample SU4-E3 (PA ID 0408167-13). Thus the activity result for Al-26 has been given a "SI" qualifier. The results are submitted without further qualification.

10. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

11. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Radiochemistry Instrument Technician — Date: 9-23-04

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

13967-48-1	Ru-106	0 +/- 0.76	1.39	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-168
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 18, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-356) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWT Workorder No: 0408168

Project Manager: LS Initials: CMO Date: 8-18-04

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	NO
2.	Is **pre-screening** required per SOP 008?		YES	NO
3.	Are custody **seals** on **shipping containers** intact?	N/A	YES	NO
4.	Are custody **seals** on **sample containers** intact?	N/A	YES	NO
5.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		YES	NO
6.	Is the **COC** (if applicable) **complete and legible**?	N/A	YES	NO
7.	Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	YES	NO
8.	Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	YES	NO
9.	Were **airbills** present and/or removable?	N/A	YES	NO
10.	Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	N/A	YES	NO
11.	Are all aqueous **non-preserved samples** at the **correct pH**?	N/A	YES	NO
12.	Is there **sufficient sample** for the requested analyses?		YES	NO
13.	Were all samples placed in the **proper containers** for the requested analyses?		YES	NO
14.	Are all samples within **holding times** for the requested analyses?		YES	NO
15.	Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	NO
16.	Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	N/A	YES	NO
17.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	N/A	YES	NO
18.	Were the sample(s) **shipped on ice**?	N/A	YES	NO
19.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** #1 #2	N/A	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1	2						
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	wet	wet						
	No. of custody seals	1	1						
DOT Survey/ Acceptance Information	External µR/hr reading	16	16						
	Background µR/hr reading	13							

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **YES / NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES / NO / NA** Contact Name: _____ Date/Time: _____

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408168

1. This report consists of analysis results for twenty soil samples received by Paragon Analytics on 8/18/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 9/16/04.

4. Sample volumes were insufficient to allow preparation of duplicates. Duplicate analyses of samples SU4-B3 and SU4-F4 (PA ID 0408168-1 and -10) were performed in lieu of prepared duplicates.

5. Duplicate analysis results above the DER warning limit of 1.42 have been flagged as "W" for Warn. For gamma spectroscopic analysis, SOP 715R13 states that 75% of the nuclides must be within the 2-sigma control limit to meet DER requirements. Elevated DER values may be attributable to sample inhomogeneity.

6. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

7. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

8. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this work order. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

9. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

10. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-169
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 18, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-382) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

Paragon Analytics

Radiochemistry Case Narrative
Gamma Spectroscopy

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408169

1. This report consists of analysis results for twenty soil samples received by Paragon Analytics on 8/18/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 9/20/04.

4. Sample volumes were insufficient to allow preparation of duplicates. Duplicate analyses of samples SU3-F3 and SU3-D1 (PA ID 0408169-1 and -10) were performed in lieu of prepared duplicates.

5. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

6. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

7. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this work order. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

8. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

9. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a reported value of 0 for samples with significant activity, including the batch laboratory control sample.

10. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Leah Balko
Radiochemistry Instrument Technician

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Library: FANP

Sample Matrix: SOIL
Prep SOP: PAI 739 Rev 8
Date Collected: 11-Aug-04
Date Prepared: 08-Sep-04
Date Analyzed: 20-Sep-04

Prep Batch: GS040908-6
QCBatchID: GS040908-6-1
Run ID: GS040908-6A
Count Time: 30 minutes
Report Basis: Dry Weight

Final Aliquot: 271 g
Prep Basis: Dry Weight
Moisture(%): NA
Result Units: pCi/g
File Name: 041609D02A

CASNO	Target Nuclide	Result +/- 2 s TPU	MDC	Lab Qualifier
14683-10-4	Sb-124	0.06 +/- 0.11	0.19	U,G
14234-35-6	Sb-125	-0.05 +/- 0.16	0.32	U,G
13967-63-0	Sc-46	0.097 +/- 0.078	0.104	U,G
15623-47-9	Th-227	0.24 +/- 0.61	1.00	U,G
15065-10-8	Th-234	0.8 +/- 1.4	2.4	U,G
14913-50-9	Tl-208	0.42 +/- 0.14	0.16	G
15117-96-1	U-235	0.34 +/- 0.42	0.69	U,G
13982-39-3	Zn-65	-0.23 +/- 0.38	0.71	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-172
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 18, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-405) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: AWI Workorder No: 0408172

Project Manager: CS Initials: CMS Date: 8/6/04

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	NO
2.	Is **pre-screening** required per SOP 008?		YES	NO
3.	Are custody **seals** on **shipping containers** intact?	N/A	YES	NO
4.	Are custody **seals** on **sample containers** intact?	N/A	YES	NO
5.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		YES	NO
6.	Is the **COC** (if applicable) **complete and legible**?	N/A	YES	NO
7.	Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	YES	NO
8.	Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	YES	NO
9.	Were **airbills** present and/or removable?	N/A	YES	NO
10.	Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	N/A	YES	NO
11.	Are all aqueous **non-preserved samples** at the **correct pH**?	N/A	YES	NO
12.	Is there **sufficient sample** for the requested analyses?		YES	NO
13.	Were all samples placed in the **proper containers** for the requested analyses?		YES	NO
14.	Are all samples within **holding times** for the requested analyses?		YES	NO
15.	Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	NO
16.	Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	N/A	YES	NO
17.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	N/A	YES	NO
18.	Were the sample(s) **shipped on ice**?	N/A	YES	NO
19.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** #1 #2	N/A	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1						
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	NA						
	No. of custody seals	1						
DOT Survey/ Acceptance Information	External µR/hr reading	16						
	Background µR/hr reading	13						

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **YES / NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES / NO / NA** Contact Name:_____ Date/Time:_____

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408172

1. This report consists of analysis results for twenty soil samples received by Paragon Analytics on 8/18/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 9/27/04.

4. Sample volumes were insufficient to allow preparation of duplicates. Duplicate analyses of samples SU5-B3 and SU5-C1 (PA ID 0408172-4 and -14) were performed in lieu of prepared duplicates.

5. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

6. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

7. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this work order. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

8. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

9. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a reported value of 0 for samples with significant activity, including the batch laboratory control sample.

10. Detector 8 was not able to pass daily quality control checks on 9/25/04. Therefore a passing daily check is not available for detector 8 on 9/25/04. Upon analyst review of the data acquired for sample SU5-D3 (PA ID 0408172-15), the data quality appears to be unaffected and the results are submitted without further qualification. Please refer to QASS 222769 in Section 5 of this report for further information.

11. No further problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

13982-39-3	Zn-65	0 +/- 0.062	0.125	U

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

15117-96-1	U-235	0.25 +/- 0.49	0.16 +/- 0.44	0.15	2.13	U,G
13982-39-3	Zn-65	-0.43 +/- 0.32	-0.29 +/- 0.26	0.34	2.13	U,G

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

13982-39-3	Zn-65	0.06 +/- 0.15	0.29	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

13967-48-1	Ru-106	-0.18 +/- 0.54	1.12	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
LT - Result is less than Requested MDC, greater than sample specific MDC.
M - The requested MDC was not met.
M3 - The requested MDC was not met, but thereported activity is greater than the reported MDC.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Re: Paragon Workorder: 04-08-173
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Twenty soil samples were received from New World Technology on August 18, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-335) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWT Workorder No: 0408173

Project Manager: LS Initials: DVO Date: 6-18-04

1.	Does this project require any **special handling** in addition to standard Paragon procedures?		YES	NO
2.	Is **pre-screening** required per SOP 008?		YES	NO
3.	Are custody **seals** on **shipping containers** intact?	N/A	YES	NO
4.	Are custody **seals** on **sample containers** intact?	N/A	YES	NO
5.	Is there a **COC (Chain-of-Custody) present** or other representative documents?		YES	NO
6.	Is the **COC** (if applicable) **complete and legible**?	N/A	YES	NO
7.	Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	YES	NO
8.	Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	YES	NO
9.	Were **airbills** present and/or removable?	N/A	YES	NO
10.	Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	N/A	YES	NO
11.	Are all aqueous **non-preserved samples** at the **correct pH**?	N/A	YES	NO
12.	Is there **sufficient sample** for the requested analyses?		YES	NO
13.	Were all samples placed in the **proper containers** for the requested analyses?		YES	NO
14.	Are all samples within **holding times** for the requested analyses?		YES	NO
15.	Were all sample containers received **intact**? (not broken or leaking, etc.)		YES	NO
16.	Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	N/A	YES	NO
17.	Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	N/A	YES	NO
18.	Were the sample(s) **shipped on ice**?	N/A	YES	NO
19.	Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*: #1 #2**	N/A	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s							
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	4A						
	No. of custody seals	1						
DOT Survey/ Acceptance Information	External µR/hr reading	16						
	Background µR/hr reading	13						

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **YES / NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES / NO / NA** Contact Name: _____ Date/Time: _____

Project Manager Signature/ Date: 8/20/04

Ravenna / GA00563

Paragon Work Order 0408173

1. This report consists of analysis results for twenty soil samples received by Paragon Analytics on 8/18/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 9/24/04.

4. Sample volumes were insufficient to allow preparation of duplicates. Duplicate analyses of samples SU5-A1 and SU5-E5 (PA ID 0408173-1 and -10) were performed in lieu of prepared duplicates.

5. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

6. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

7. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this work order. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

8. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

9. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

13982-39-3	Zn-65	0.06 +/- 0.48	0.84	U,G

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Re: Paragon Workorder: 04-08-174
Client Project Name: Ravenna
Client Project Number: GA00563

Dear Mr. Spicuzza:

Eleven soil samples were received from New World Technology on August 18, 2004. The samples were scheduled for Gamma Spectroscopy (pages 1-239) analysis. The results for this analysis are contained in the enclosed reports.

Thank you for your confidence in Paragon Analytics. Should you have any questions, please call.

Sincerely,

Paragon Analytics
Lance Steere
Senior Project Manager

CONDITION OF SAMPLE UPON RECEIPT FORM

Client: NWT Workorder No: 0408174

Project Manager: LS Initials: CMD Date: 8-18-04

1. Does this project require any **special handling** in addition to standard Paragon procedures?		YES	(NO)
2. Is **pre-screening** required per SOP 008?		YES	(NO)
3. Are custody **seals** on **shipping containers** intact?	N/A	(YES)	NO
4. Are custody **seals** on **sample containers** intact?	(N/A)	YES	NO
5. Is there a **COC (Chain-of-Custody) present** or other representative documents?		(YES)	NO
6. Is the **COC** (if applicable) **complete and legible**?	N/A	(YES)	NO
7. Are **bottle IDs legible** and in **agreement** with **COC sample IDs**?	N/A	(YES)	NO
8. Is the COC in agreement with samples received? (**# of samples, # of containers, matrix**)	N/A	(YES)	NO
9. Were **airbills** present and/or removable?	N/A	(YES)	NO
10. Are all **aqueous samples** requiring preservation **preserved correctly**? (excluding volatile organics)	(N/A)	YES	NO
11. Are all aqueous **non-preserved samples** at the **correct pH**?	(N/A)	YES	NO
12. Is there **sufficient sample** for the requested analyses?		(YES)	NO
13. Were all samples placed in the **proper containers** for the requested analyses?		(YES)	NO
14. Are all samples within **holding times** for the requested analyses?		(YES)	NO
15. Were all sample containers received **intact**? (not broken or leaking, etc.)		(YES)	NO
16. Are all samples requiring no headspace (volatiles, reactive cyanide/sulfide, radon), headspace free? **Size of bubble**: ____ < green pea ____ > green pea	(N/A)	YES	NO
17. Were samples checked for and free from the presence of **residual chlorine?** (Applicable when PM has indicated samples are from a chlorinated water source; note if field preservation with sodium thiosulfate was not observed.)	(N/A)	YES	NO
18. Were the sample(s) **shipped on ice**?	(N/A)	YES	NO
19. Were cooler temperatures measured at 0.1-6.0°C? **IR gun used*:** **#1** **#2**	(N/A)	YES	NO

*IR Gun #1: Raytek, SN SC-PM3/T29403	Cooler #'s	1						
*IR Gun #2: Oakton, SN 2SCIR1201	Temperature	NA						
	No. of custody seals	1						
DOT Survey/ Acceptance Information	External µR/hr reading	16						
	Background µR/hr reading	13						

Were external µR/hr readings ≤ two times background and within DOT acceptance criteria? **(YES) / NO** (If no, see Form 008.)

Additional Information: PROVIDE DETAILS BELOW FOR A NO RESPONSE TO ANY QUESTION ABOVE EXCEPT #1 AND #2.

If applicable, was the client contacted? **YES / NO / NA** Contact Name:_____ Date/Time:_____

New World Technologies

Ravenna / GA00563

Paragon Work Order 0408174

1. This report consists of analysis results for eleven soil samples received by Paragon Analytics on 8/18/04. The analysis results for these samples are reported on a 'dry weight' basis in units of pCi/gram.

2. These samples were prepared according to Paragon Analytics procedure PA SOP739R8.

3. The samples were analyzed for the presence of gamma emitting radionuclides according to Paragon Analytics procedure PA SOP713R8. The analyses were completed on 9/27/04.

4. Sample volumes were insufficient to allow preparation of duplicates. Duplicate analyses of samples SU5-RCS-1 and SU4-RCS-2 (PA ID 0408174-1 and -11) were performed in lieu of prepared duplicates.

5. Activity concentrations above the calculated MDC are reported in some instances where minimum nuclide identification criteria are not met. Such tentative identifications result when the software attempts to calculate net activity concentrations for analytes where either one or both of the following criteria are not satisfied: the 'diagnostic' peak for a nuclide must be identified above the critical level, or the minimum library peak abundance must be attained. Nuclides not meeting these requirements have been flagged with a "TI" qualifier.

6. Paragon Analytics has found there to be a significant low bias to Pb-214 and Bi-214 results when using a mixed nuclide gamma source for efficiency calibrations. The magnitude of this bias has been determined to be approximately 32% for Bi-214, and 23% for Pb-214. Therefore, any reported results for Pb-214 and Bi-214 are flagged with a "J" qualifier, indicating the activity values to be an estimated value. Results are reported without further qualification.

7. There are cases where the sample density is less than the associated calibration standard density. Cases that exceed the limit of +/- 15% of the density of the calibration standard are flagged with a 'G', denoting a significant density difference between the sample and calibration standard. Consequently, the results may be biased high for the flagged results in this work order. If requested, Paragon Analytics will perform a transmission spike in order to estimate a magnitude of this bias. The results are reported without further qualification.

8. There are cases where the magnitude of negative activity is greater than the 2-sigma TPU. Under typical conditions, where background data is normally distributed and analyzed by paired observations, this event is likely to occur at least 2.5% of the time. Review of the data does not indicate a problem with the instrument or reporting systems and results are reported without further qualification.

9. Paragon Analytics follows the convention outlined in ANSI N42.23 for reporting significant digits in the TPU and MDC results. ANSI N42.23 states that the TPU result should be rounded to two significant digits and that the MDC result should be rounded to the same decimal place as the TPU result. In practice, this could result in an MDC result with a reported value of 0 for samples with significant activity, including the batch laboratory control sample.

10. No problems were encountered with either the client samples or the associated quality control samples. All quality control criteria were met.

The data contained in the following report have been reviewed and approved by the personnel listed below. In addition, Paragon Analytics certifies that the analyses reported herein are true, complete and correct within the limits of the methods employed.

Leah Balke
Radiochemistry Instrument Technician

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

M - Requested MDC not met.

B - Analyte concentration greater than MDC.

B3 - Analyte concentration greater than MDC but less than Requested MDC.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Duplicate Qualifiers/Flags:

U - Result is less than the sample specific MDC.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13
LT - Result is less than Request MDC, greater than sample specific MDC
M - Requested MDC not met.
M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.
L - LCS Recovery below lower control limit.
H - LCS Recovery above upper control limit.
P - LCS, Matrix Spike Recovery within control limits.
N - Matrix Spike Recovery outside control limits
SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)
DER - Duplicate Error Ratio
BDL - Below Detection Limit
NR - Not Reported

M3 - The requested MDC was not met, but thereported activity is greater than the reported MDC.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:
TPU - Total Propagated Uncertainty (see PAI SOP 743)
MDC - Minimum Detectable Concentration (see PAI SOP 709)
BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU

Y1 - Chemical Yield is in control at 100-110%. Quantitative Yield is assumed.

Y2 - Chemical Yield outside default limits.

LT - Result is less than Requested MDC, greater than sample specific MDC.

M3 - The requested MDC was not met, but the reported activity is greater than the reported MDC.

M - The requested MDC was not met.

SQ - Spectral quality prevents accurate quantitation.

SI - Nuclide identification and/or quantitation is tentative.

TI - Nuclide identification is tentative.

R - Nuclide has exceeded 8 halflives.

G - Sample density differs by more than 15% of LCS density.

Abbreviations:

TPU - Total Propagated Uncertainty (see PAI SOP 743)

MDC - Minimum Detectable Concentration (see PAI SOP 709)

BDL - Below Detection Limit

Comments:

Qualifiers/Flags:

U - Result is less than the sample specific MDC or less than the associated TPU.
Y1 - Chemical Yield is in control at 100-110%. Quantitative yield is assumed.
Y2 - Chemical Yield outside default limits.
LT - Result is less than Requested MDC, greater than sample specific MDC.
M - The requested MDC was not met.
M3 - The requested MDC was not met, but thereported activity is greater than the reported MDC.
W - DER is greater than Warning Limit of 1.42
D - DER is greater than Control Limit of 2.13

SQ - Spectral quality prevents accurate quantitation.
SI - Nuclide identification and/or quantitation is tentative.
TI - Nuclide identification is tentative.
R - Nuclide has exceeded 8 halflives.
G - Sample density differs by more than 15% of LCS density.

Abbreviations:
TPU - Total Propagated Uncertainty (see PAI SOP 743)
MDC - Minimum Detectable Concentration (see PAI SOP 709)
BDL - Below Detection Limit

White Copy - (Original) Retain with Samples Yellow Copy - Customer Pink Copy - Retain for Project Files

NWT Resolution of Ohio EPA/Ohio Department of Health/NRC Comments on the Ravenna West Tank Farm Final Status Survey Report

Comment Number/Date	Responsible Agency	Comment	Reply/Resolution
1/12-8-04	Ohio EPA Eileen Mohr (EM)	On December 1, 2004, an email was sent to your attention inquiring as to whether or not Mr. Joe Crombie of the Ohio Department of Health (ODH) ha received a copy of this report. As of this date, a response has not been received. Please confirm whether or not a hard copy of the report was sent to Mr. Crombies attention. Again, the ODH is the lead regulatory agency for Ohio on this project.	An electronic copy of the report was sent to Mr. Crombies attention.
2/12-8-04	Ohio EPA Eileen Mohr (EM)	As previously mentioned, the issue of potential groundwater contamination has not been addressed and resolved. (Page 6, Section 2.0).	The following text was added to Section 2.0 of the next report revision: "Potential groundwater contamination was not included in the scope of work for NWT. The issue will be discussed and resolved by all stakeholders at a later time."
3/12-8-04	Ohio EPA Eileen Mohr (EM)	Please clarify why no confirmation samples were collected in the area where it was suspected that cardboard drums were buried. (Page 8, third paragraph, Section 3.0).	The third paragraph on Page 8 in Section 3.0 of the next report revision was revised to state: "A total of 24 subsurface soil samples were collected from the locations where removal efforts were required to a depth of ~ 3 foot below grade. Subsurface (~ 3 foot below grade) samples were collected from each sampling location. All of the sample results were below the DCGL of 4.0 pCi/g. Figure 1 presents the locations of the subsurface soil samples and Table 1 presents a summary of the results."
4 /12-8-04	Ohio EPA Eileen Mohr (EM)	Please clarify whether or not the correct text is found under header 5.2.2 (equipment and tools) on pages 13-14.	The correct text is found under the header 5.2.2. This is the release criteria for equipment and tools that would have been potentially contaminated during the project.
5/12-8-04	Ohio EPA Eileen Mohr (EM)	On figure 2 there appears to be two survey units #2. Please clarify.	The area across from the railroad tracks is included in Survey Unit #2 and is not a second Survey Unit #2.
6/12-8-04	Ohio EPA Eileen Mohr (EM)	On Figure 3 (Page 19), please use different colors to differentiate the class 1 from the class 2 grids.	Figure 4 (old Figure 3) of the next report revision was revised to use different colors to differentiate the Class 1 areas from the Class 2 areas.
7/12-8-04	Ohio EPA Eileen Mohr (EM)	On Figures 4-7, please use different colors to denote the areas requiring remediation. The selected symbols blend too much together. Also, the meaning of the small round dot should be explained.	Figures 5-8 (old Figures 4-7) of next report revision were revised to use different symbols, each with a different color. A footnote depicting the meaning of the small round dot was also added to the figures.
8/12-8-04	Ohio EPA Eileen Mohr (EM)	On Figures 8-11, please use different colors to the symbols marking the sample location points, the random start points, and the remediation control sample points. Also, please provide information as to how sample locations were selected and add a footnote to the figure.	Figures 9-12 (old Figures 8-11) of the next report revision were revised to use different symbols, each with a different color to denote the sample location points, random start points, and the remediation control sample points. A footnote was added to the figures stating that the remediation control samples

NWT Resolution of Ohio EPA/Ohio Department of Health/NRC Comments on the Ravenna West Tank Farm Final Status Survey Report

			locations were collected in areas that were remediated.
9/12-8-04	Ohio EPA Eileen Mohr (EM)	The text on page 28 (Section 5.7.2) indicates that the analytical result for sample SU3-RCS-7 was above the DCGL. Provide additional information as to what potential impact this has on the remediation.	Section 5.7.2 of the next report revision was revised to state: "All of the remediation control samples were below the DCGL of 4.0 pCi/g, with the exception of sample SU3-RCS-7, which was 4.09 pCi/g. Even though the result of this sample was above the DCGL, based upon the size of the area (~ 2 m^2), the results are below the $DCGL_{EMC}$ of 7.6 pCi/g calculated in Section 5.9.6 of this report which is based upon a size of 90 m^2. A summary of the results are presented in Table 2 below."
10/12-8-04	Ohio EPA Eileen Mohr (EM)	On Figure 12, please use different colors to denote the random start point and the sample locations.	Figure 13 (old Figure 12) of the next report revision was revised to use different symbols, each with a different color.
11/12-8-04	Ohio EPA Eileen Mohr (EM)	Was page 39 intentionally left blank?	This was a misprint. Page 39 of the next report revision is not blank as there is text present on Page 39.
12/12-8-04	Ohio EPA Eileen Mohr (EM)	On Figures 13-17, please use different colors to denote random start point and the sample locations.	Figures 14-18 (old Figures 13-17) of the next report revision were revised to use different symbols, each with a different color, to denote the random start point and sample locations.
13/12-8-04	Ohio EPA Eileen Mohr (EM)	On page 47 (Figure 18),please clarify what is meant by "Series 1".	"Series 1" should be the instruments serial numbers in the legend. Figure 19 (old Figure 18) of the next report revision was revised to state "Instrument S/Ns: 95337-134743-142506" in the legend.
14/12-8-04	Ohio EPA Eileen Mohr (EM)	On pages 48 (Figure 19) and page 52 (Figure 23) ,please clarify what is meant by "# 95337".	"# 95337" is the instrument serial number. Figure 20 and Figure 24 (old Figures 19 and 23) of the next report revision were revised to state "Instrument S/N: 95337" in the legend.
15/12-8-04	Ohio EPA Eileen Mohr (EM)	On pages 49 (Figure 20), 50 (Figure 21), and 51 (figure 22) please clarify what is meant by "# 134743".	"# 134743" is the instrument serial number. Figure 21, Figure 22, and Figure 23 (old Figures 20, 21, and 22) of the next report revision were revised to state "Instrument S/N: 134743" in the legend.
16/12-8-04	Ohio EPA Eileen Mohr (EM)	Section 7.4 (data management) is missing from the report. Please provide this section in the revised text.	Section 7.4 of the next report revision is provided in the report. It states: "Documentation of all surveys and associated data was performed as detailed in the NWT Work Plan and specific NWT procedures. Survey data was obtained and recorded electronically in the field. Once collected, it was reviewed by

			knowledgeable individuals not directly involved in the collection of the data for completeness. Once reviewed, the data was maintained on a single computer and backup copies of the information were made. Analysis and presentation of the data was in accordance with guidance provided in MARRSIM. Field samples were collected and controlled using Chain of Custody protocols as detailed in NWT operational procedures. The resultant laboratory analysis results were compared to the DCGL of 4.0 pCi/g of Th-232. The individual results and laboratory QA/QC results were reviewed for completeness and reasonableness."
17/12-8-04	Ohio EPA Eileen Mohr (EM)	Section 8.0 (conclusions) is missing from the report. Please provide this section in the revised text.	Section 8.0 of the next report revision is provided in the report. It states: "Based upon the gamma scan survey results and soil sample analysis, the West Tank Farm Area meets the established radiological release criteria for unrestricted use. Survey and sample results from all areas were compared to the established DCGL using statistical analysis guidance as provided in MARRSIM. The DCGL of 4.0 pCi/g of Th-232 was met in all cases, resulting in a calculated TEDE to the maximally exposed individual of less than 25 mrem/y."
18/12-8-04	Ohio EPA Eileen Mohr (EM)	Appendix G. There are several chain of custody (COC) forms that are missing pages.	All of the chain of custody forms are present in the next report revision. Since different samples were analyzed with different work orders it appeared as if all of the chain of custody forms were not present in the report. A separate section was added after the analytical data section in Appendix G of the next report revision that includes all of the chain of custody forms, which makes it easier to confirm that all of the forms and pages are present.
19/12-8-04	Ohio EPA Eileen Mohr (EM)	Appendix G. There are numerous instances where the proper protocol for making changes was not followed (specifically, one line strikeout with initials)	All of the chain of custody forms were reviewed to ensure that and any changes made by NWT followed the proper protocol (one line strikeout, initials and dated).
20/12-8-04	Ohio EPA Eileen Mohr (EM)	Appendix G. Several sample receipt forms indicate that the lids were missing from sample jars or cracked, that mud was present on the outside of the containers, that it was difficult to determine whether or not there was any cross-contamination from samples, etc. The case narratives then go on to declare that "no problems were encountered	The following text was added to Section 7.5 of the next report revision: "Several of the sample receipt forms in Appendix G indicated that the lids were missing from sample jars

		with the client samples". It is unclear as to how this declaration could have been made. Additionally, it is unclear as to whether or not this had any impact upon the project.	or cracked, that mud was present on the outside of the containers, that it was difficult to determine whether or not there was any cross-contamination from samples, etc. The case narratives then go on to declare that "no problems were encountered with the client samples". The case narratives for the gamma spectroscopy analysis do not specifically address the issues with the *sample receipts*. When the narratives state "No problems were encountered with the client samples....", they mean *only* in terms of the gamma analysis, e.g. instrument calibrations, daily instrument checks, QC sample performance, etc. The Condition on Receipt Forms document receipt issues. Unless there was unusual action taken in the analysis, as a result of receipt issues, then no additional 'coverage' of such issues will be narrated. Each of the sample containers were contained in individual bubble wrap bags and no soil/mud had escaped from the individual bags. In all of these cases (of bad lids, etc), the Paragon Analytics Project Manager documented that there were "only minor losses from these jars", or other verbiage indicating the likelyhood of cross contamination was believed to be minimal. Paragon cannot, of course, guarantee zero cross contamination, but based on the inspections they made at the time, it was their professional opinion that the potential was very low."
