NOTE(S):

Calculations are performed before rounding to avoid round-off errors in calculated results.

NC The recovery and/or RPD were not calculated.

MSB The recovery and RPD may be outside control limits because the sample amount was greater than 4X the spike amount.

Results and reporting limits have been adjusted for dry weight.

N Spiked analyte recovery is outside stated control limits.

Case Narrative

TestAmerica West Sacramento Project Number A0B250463

General Comments
Samples 13-16, 18, & 20 were dried, ground, & sieved by the TestAmerica North Canton lab.

Manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: S-Q-004, including Addendum 1. Detailed information can be found in the Manual Integration Addendum section of this report.

SOLID, 8330B, Explosives
Sample(s): 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 18, 20
The matrix spikes, which were performed on samples 9 & 20 have some low recoveries for 4-amino-2,6-dinitrotoluene due to possible matrix interferences. Since the laboratory control sample met acceptance criteria, no corrective action was performed.

There were no other anomalies associated with this project.

Subject: **Contract Line Item (CLIN) 2.2 – Implementation of Remedial Investigation Work Plan ~ Characterization and Disposal Letter Report for Soil Cuttings and Decontamination Fluids**

Dear Mr. Nichter:

Investigative activities in accordance with the *PBA 2008 Supplemental Investigation Sampling and Analysis Plan Addendum No. 1* (December 2009) (herein referred to as the SAP Addendum No. 1) were performed from February 15, 2010 through April 14, 2010. These activities have resulted in the generation of Investigation-Derived Waste (IDW) consisting of soil cuttings from drilling activities and equipment decontamination fluids. The purpose of this letter is to characterize and classify IDW for disposal and to propose methods for disposing the IDW.

This letter report includes a summary of IDW generated, the origin of the IDW (Table 1), as well as proposed classification and recommendations for disposal of the IDW (Table 2). This letter report follows guidance established by the following:

1) The *Facility-Wide Sampling and Analysis Plan* (USACE 2001) (herein referred to at the Facility-wide SAP);
2) The SAP Addendum No. 1; and
3) Letter to RVAAP/USACE Regarding IDW Disposal Guidance (Ohio EPA, November 3, 1997).

Three distinct IDW streams were sampled as part of the PBA 2008 RI field activities. Each waste stream was composited and sampled on April 14, 2010 per requirements outlined in Section 7.0 of the Facility-wide SAP and SAP Addendum No. 1. IDW streams generated are:

- One (1), 15-gallon drum containing 2% HCl and DI water from equipment decontamination rinse;
- Six (6), 55-gallon drums containing liquinox wash water from equipment decontamination; and
- Twelve (12), 55-gallon drums containing soil and sediment from PBA 2008 RI activities.

SAIC-2009-3, SAIC-2010-12, SAIC-2010-20, SAIC-2010-21 are not included in this list as these containers are partially full and have been carried over to future planned PBA 2008 sampling to minimize IDW waste containers. These four containers have not been sampled.

Liquid IDW Discussion

Per Section 7.0 of the Facility-wide SAP, two composite waste samples were collected for Toxicity Characteristic Leaching Procedure (TCLP) parameters and submitted for laboratory analysis to characterize the waste streams for disposal. The first sample (PBA-WW-IDW-5787-WW) characterized one drum of decontamination fluids containing 2% HCl and DI Water. The second sample (PBA-WW-ODW-5788-WW) was composited from six drums containing liquinox wash water from equipment decontamination. Upon receipt of analytical results from the laboratory, the analytical results were validated and reviewed to determine if the waste was potentially hazardous. This review consisted of a comparison of the analytical results against the TCLP criteria presented in Table 7-1, Maximum Concentration of Contaminants for the Toxicity Characteristic (40 *CFR* 261.24), presented in the Facility-Wide SAP (USACE 2001) and Resource Conservation Recovery Act (RCRA) Hazardous Waste regulations 40 *CFR* 261 – 265.

Attachment 1 presents the analytical laboratory data for TCLP analysis for IDW water generated during ongoing field activities. The results are summarized below:

1) All analytical results were below quantitative limits for the IDW liquid sample;
2) The pH for the IDW aqueous waste is considered neutral (2 S. U. < pH < 12 S.U.);
3) The flash point was below detectable limits, >180°F.

Given the observed analytical results, it is recommended that both liquid IDW streams be classified as non-hazardous, non-contaminated.

Solid IDW Discussion

Per Section 7.0 of the Facility-wide SAP, a composite waste sample (PBA-SO-IDW-5806-SO) was collected for TCLP parameters and submitted for laboratory analysis to characterize the soil IDW for disposal. Upon receipt of analytical results from the laboratory, the analytical results were validated and reviewed to determine if the waste was potentially hazardous. This review consisted of a comparison of the analytical results against the TCLP criteria presented in Table 7-1, Maximum Concentration of Contaminants for the Toxicity Characteristic (40 *CFR* 261.24), presented in the Facility-Wide SAP (USACE 2001) and RCRA Hazardous Waste regulations 40 *CFR* 261 – 265.

Attachment 1 presents the analytical laboratory data for TCLP analysis for solid IDW generated during ongoing field activities. The results are summarized below:

1) All analytical results were below quantitative limits for the IDW solid sample;
2) The pH for the IDW sample was neutral, at 7.5 standard units; and
3) The flash point was below detectable limits, >180°F.

Given the observed analytical results, it is recommended that the solid IDW stream be classified as non-hazardous, non-contaminated.

Recommended Disposal Pathways for IDW

Table 2 presents the disposal pathway identified as a result of IDW characterization data. Please note that this IDW has been characterized under provisions of the Facility-Wide SAP and SAP Addendum No. 1 using TCLP analyses and process knowledge. SAIC recommends that all IDW be disposed as non-hazardous, non-contaminated waste to be removed offsite by a permitted water treatment or waste

facility unless the U.S. Army has additional information that would result in the IDW meeting the definition of a listed hazardous waste as defined in 40 *CFR* Part 261 Subpart D.

RE: ***RAVENNA ARMY AMMUNITION PLANT, PORTAGE/TRUMBULL COUNTIES, DRAFT, INVESTIGATION DERIVEDWASTE AND DISPOSAL PLAN, FWGWMP, FOR THE "IMPLEMENTATION OF REMEDIAL INVESTIGATION WORK PLAN-CHARACTERIZATION AND DISPOSAL, LETTER REPORT FOR SOIL CUTTINGS AND DECONTAMINATION FLUIDS" DATED MAY 25, 2010***

Dear Mr. Patterson:

The Ohio Environmental Protection Agency (Ohio EPA) has received and reviewed the "Implementation of Remedial Investigation Work Plan-characterization and Disposal Letter Report for Soil cuttings and Decontamination Fluids" at the Ravenna Army Ammunition Plant, Ravenna, OH document. This document was received at Ohio EPA, Northeast District Office (NEDO), Division of Emergency and Remedial response (DERR), and is dated May 25, 2010. The document was prepared for the U.S. Army Corps of Engineers (USACE) – Louisville District, by SAIC Engineering of Ohio, Inc., under contract no. W912QR-04-D-0028.

The report is approved and Ohio EPA concurs that the generation of Investigation Derived Waste (IDW) consisting of purged water may be disposed of as non-contaminated, non-hazardous waste and that it be sent off-site for disposal to a permitted water treatment facility.

If you have any questions, please call me at (330) 963-1207.

Sincerely,

Vicki Deppisch

[a]Facility-wide Clean-up Goals (FWCUG) for Resident Farmer Adult (RFA) and Resident Farmer Child (RFC) from *Facility-Wide Human Health Cleanup Goals for the Ravenna Army Ammunition Plant* (USACE 2010). The lower of the two values for the RFA and RFC are presented as identified.

[b]Background criteria are final facility-wide background values for RVAAP, published in the *Final Phase II Remedial Investigation Report for Winklepeck Burning Grounds at Ravenna Army Ammunition Plant, Ravenna, Ohio* (USACE 2001).

[c]Precedent cleanup goal (CUG) from Table 5-12 of *Facility-Wide Human Health Cleanup Goals for the Ravenna Army Ammunition Plant* (USACE 2010).

[d]Based on the lines of evidence presented in Section 7.2.4.1, chromium speciation results indicate most or all of the chromium present is not in the hexavalent form; the concentration of total chromium detected is compared to the FWCUG for trivalent chromium.

*Aluminum is identified as a COPEC only at sites where the soil pH is less than 5.5.
**In well-aerated soils between pH 5 and 8, iron is not expected to be toxic to plants. A determination of the geochemical conditions (i.e., pH and Eh at a minimum) of the environmental setting, as well as the presence of iron floc and the toxic metals, is critical to the determination of the relative importance of iron at a site.

[b]Ohio EPA does not restrict preserves and natural areas to National or State.
[c]Ohio EPA lists "wildlife populations and their associated important nesting areas and food resources, taking into consideration land use and the quality and extent of habitat on and in the vicinity of the site."
[d]Within river reaches or areas in lakes or coastal tidal waters in which fish spend extended periods of time.

Table H-5. Natural Resources Management Goals (OHARNG 2008)

Goals and Objectives of Ohio Army National Guard	Comments on Goals Relative to HTRW Work at RVAAP
Goal 1. Manage natural resources in a manner that is compatible with and supports the military mission while complying with applicable Federal and State laws and Army regulations and policies. Objective 1.1: Initiate programs and projects that enhance the training land and training opportunities and/or do not unnecessarily limit training land availability. Objective 1.2: Continue to educate Camp Ravenna users regarding the natural resources at the Camp Ravenna and their part in ensuring sustainable use of the site in perpetuity.	U.S. Army committed to natural resources management in a manner that is compatible with and supports the military mission and complies with Federal and State laws and Army regulations and policies.
Goal 2. Maintain and foster positive working relationships with the U.S. Fish and Wildlife Service, the ODNR DOW, and other federal, state and local natural resources management agencies and organizations for the benefit of the military mission, the natural resources being managed, and the citizens of Ohio and the nation. Objective 2.1: Effectively communicate mission needs to cooperating agencies and solicit input/review on projects with the potential to impact natural resources, especially in areas of regulatory primacy. Objective 2.2: Provide copies of biological surveys to interested cooperating agencies. Objective 2.3: Facilitate cooperative management programs and projects that are compatible with the military mission and within the capabilities of the Camp Ravenna staff.	The U.S. Army works and coordinates with other federal and state agencies as necessary if mission or projects have the potential to impact natural resources.
Goal 3. Monitor the condition of the natural resources and the implied impacts from training and the natural resources management program on the natural resources at the Camp Ravenna. Objective 3.1: Maintain current species inventories and other PLSs through periodic reoccurring surveys and inventories.	The U.S. Army conducts natural resource management activities at the facility to monitor potential impacts from training or other disturbance activities.
Goal 4. Protect and maintain populations of rare plant and animal species on the Camp Ravenna in compliance with Federal and State laws and regulations. Objective 4.1: Avoid negative impacts to federally listed species and avoid/minimize impacts to State listed and otherwise rare species.	The U.S. Army protects and maintains populations of rare plant and animal species by implementing a natural resource management plan at the facility and by avoiding and/or not disturbing areas with rare species.

Table H-5. Natural Resources Management Goals (OHARNG 2008) (continued)

Goals and Objectives of Ohio Army National Guard	Comments on Goals Relative to HTRW Work at RVAAP
Goal 5. Sustain usable training lands and native natural resources by managing non-native and invasive species, vegetation and plant communities, and nuisance wildlife species. Objective 5.1: Manage populations of invasive plant species where they hinder training and/or habitat management objectives. Objective 5.2: Manage non-native and invasive insect species that pose a threat to forest resources. Objective 5.3: Manage terrestrial vegetation to support training, encourage native plant communities, and prevent damage to training site facilities and infrastructure. Objective 5.4: Manage the beaver population to prevent damage to training site facilities and infrastructure and to maintain the quality warm water habitats of Hinkley Creek, Sand Creek, and South Fork Eagle Creek. Objective 5.5: Manage other nuisance animals that negatively impact the ecosystem.	The U.S. Army sustains usable training lands and native natural resources by implementing a natural resource management plan which incorporates invasive species and nuisance species management and by utilizing native species mixes for re-vegetation after ground disturbance activities.
Goal 6. Manage wildlife resources in a manner compatible with the military mission and within the limits of the natural habitat. Objective 6.1: Cooperatively manage wildlife resources with the Ohio DOW. Objective 6.2: Provide opportunity for wildlife recreation to the public that is compatible with the military mission. Objective 6.3: Maintain wildlife population without augmenting the habitat with artificial food plots.	The U.S. Army minimizes habitat disturbance during HTRW activities and utilizes sustainability practices when disturbance is required in order to properly manage and maintain wildlife populations and resources.

Table H-5. Natural Resources Management Goals (OHARNG 2008) (continued)

Goals and Objectives of Ohio Army National Guard	Comments on Goals Relative to HTRW Work at RVAAP
Goal 7. Manage forest resources to the benefit of the military mission, to perpetuate the ecosystem functions, to support regional ecosystem needs, and for the production of forest products. Objective 7.1: Maintain current forest resource data. Objective 7.2: Implement forest management strategies identified in the Camp Ravenna INRMP.	The U.S. Army sustains and manages forest resources by implementing a natural resource management plan. During HTRW activities, efforts are made by the Army to minimize impacts to forest communities.
Goal 8. Manage wetlands and other surface waters in accordance with applicable Federal, State, and local regulations and to protect water quality and ecological functions while facilitating the military mission. Objective 8.1: Avoid wetland fills. Objective 8.2: Minimize and mitigate unavoidable wetland fills. Objective 8.3: Maintain healthy aquatic ecosystems in ponds. Objective 8.4: Restore, enhance and create wetlands when possible and compatible with the military mission.	Wetlands and other surface waters are to be protected during disturbance activities in accordance with Federal, State, and local regulations. Avoidance measures will be implemented as practical. Some AOCs have wetlands.
Goal 9. Manage soil to maintain productivity and prevent and repair erosion in accordance with State and Federal laws and regulations so that the Camp Ravenna can support doctrinally required military training in perpetuity. Objective 9.1: Conduct training and other activities in locations with soil most suitable for supporting the activity. Objective 9.2: Rehabilitate, repair, and maintain areas damaged by training and other activities.	Management of soil relevant to remedial activities under CERCLA. Appropriate storm water and erosion controls are to be utilized during activities that require ground disturbance.

Goals and Objectives of Ohio Army National Guard	Comments on Goals Relative to HTRW Work at RVAAP
Goal 10. Manage cultural resources on the Camp Ravenna in accordance with State and Federal laws and regulations while implementing the natural resources management program. Objective 10.1: Comply with Federal, State, and local laws and regulations pertaining to cultural resources found on the training site.	The U.S. Army utilizes a cultural resource management plan to manage and protect cultural resources at the facility. Coordination with state and federal agencies regarding cultural resources is conducting as necessary. Restoration contractors are also advised to utilize the Camp Ravenna Policy for Inadvertent Discoveries for reporting purposes should they come upon a cultural item.
Goal 11. Develop, maintain, and manage data regarding natural resources at the Camp Ravenna through the use of GIS for efficient data storage, retrieval, analysis, and presentation. Objective 11.1: Develop accurate and usable natural resources GIS data.	Natural resource data is collected and managed by the OHARNG. This data may be utilized during restoration activities in order to provide an accurate portrait of natural resources at an AOC.

O-1.	GENERAL (ALL RPTS)	This report consistently cites the older Facility-Wide Sampling Analysis Plan for Environmental Investigations at the Ravenna Army Ammunition Plant (USACE 2001).	Please provide an explanation as to why the Final Facility-Wide Sampling and Analysis Plan for Environmental Investigations at the Ravenna Army Ammunition Plant,(USACE 2011) is not being referenced.	Clarification and agree. When referencing the FWSAP, it is in reference to sampling performed under the PBA08 Remedial Investigation. This effort was performed in February – April 2009 under the 2001 FWSAP. The 2011 FWSAP was finalized and approved after the PBA08 RI. To clarify in the text, the revisions below are recommended for Page 4-3, Lines 20-22: A preliminary CSM was developed in the *Performance Based Acquisition 2008 Supplemental Investigation Sampling and Analysis Plan Addendum No. 1* (herein referred to as the PBA08 SAP) to develop sampling rationales and data quality objectives (DQOs) for the PBA08 RI at Anchor Test Area (USACE 2009a). The PBA08 SAP was developed in accordance with the *Facility-Wide Sampling and Analysis Plan* (USACE 2001a) (herein referred to as the FWSAP). A updated version of the FWSAP was developed in February 2011 and approved by the Ohio EPA; however, the PBA08 RI was implemented prior to approval of this updated version. The preliminary CSM…

The first paragraph in Section 2.1.2 has been changed as follows: Census projections for 2010 indicate that the populations of Portage and Trumbull counties are 161,419 and 210,312, respectively. Population centers closest to RVAAP are Ravenna, with a population of 11,724 and

O-5.	Page 5-7, lines 14-17 (ALL RPTS)	The text states that Shelby tube samples were capped, sealed with wax, and submitted for laboratory geotechnical analysis for porosity, bulk density, moisture content, TOC, grain size, and permeability. The text also states that laboratory analytical results for geotechnical samples are presented in Appendix D. The results of the geotechnical analysis have been omitted from Appendix D.	Please provide geotechnical analysis results in Appendix D or indicate in the text where the geotechnical analytical results can be found.	Clarification. The analytical results for the geotechnical samples are presented in Appendix D. The laboratory results can be seen in the Appx D: Laboratory Analytical Results CD for the hard copy or starting on page 2,482 of the compiled PDF. Please note that the SAIC generated results tables were not in Appendix D since they were presented in the main text on page 5-25, Table 5-9. To rectify, we have included a copy of the Summary of Geotechnical Parameters at the end of the tables presented in Appendix D.
O-6.	GENERAL, Section 7.2 Human Risk Assessment	Incorrect Sum of Ratios for non-carcinogens. The report discusses only summing HQs for COCs that have the same target organ or mechanism of action. Actually, all HQs should be summed and only those with the same target organ or mechanism of action should be pulled out into their own category.	Please correct the Sum of Ratios for non-carcinogens in the text and associated tables.	Clarification. The SOR analysis was conducted in accordance with the approach described in the FWCUG Report (Page 5-2) as summarized below: • For noncarcinogens, compare the chemical-specific EPCs to the target risk FWCUG. • If the ratio of the EPC/FWCUG > 1, the chemical is a chemical of concern (COC). • Sum the ratios of chemicals that effect similar target organs. If the sum of ratios > 1, chemicals contributing at least 10% to the sum are also considered COCs for the site.

O-7.	GENERAL, Section 7.2 Human Risk Assessment (ALL RPTS)	The report brought in a discussion on the NCP risk range of 1E-4 to 1E-6. We have stated many times that Ohio EPA has a fixed risk goal of 1E-5. (http://epa.ohio.gov/portals/30/rules/HH%20Cumulative%20Carc%20Risk%20and%20Non-Carc%20Hazard%20Goals.pdf). The DERR Remedial Response program has adopted a human health cumulative excess lifetime carcinogenic risk goal of 1E-5 and a cumulative non-cancer hazard goal equal to a hazard index (HI) of 1, for all receptors and land uses. These goals are to be used as both the level of acceptable excess cancer risk or non-cancer hazard and for the development of remediation goals for a site. The defined risk and hazard goals should be applied as a *goal*, recognizing the need to retain flexibility during the evaluation and selection of remedial alternatives.	This should be used or at a minimum discussed as the appropriate risk goal for RVAAP. Please make the appropriate changes to the text and associated tables.	Clarification and agree. Please note that the target risk for identification of COCs in the RI is 1E-05 as noted in the text and tables. For example, also in Section 7.2.4 the text notes: "The COPC is identified as a COC for a given receptor: If the EPC exceeds the more protective FWCUG for either the 1E-05 target cancer risk or the 1.0 target HQ". Table 7-6 provides the FWCUGs corresponding to an HQ of 1.0 and target risk of 1E-05 and these are the FWCUG used in all of the Appendix G COC screening tables." To provide additional clarification, the following text has been added to describe cancer risk in Section 7.2.4: "For carcinogens, risk is expressed as the probability that an individual will develop cancer over a lifetime as a result of exposure to the carcinogen. Cancer risk from exposure to contamination is expressed as the increased chance of cancer above the normal background rate of cancer. In the United States, the background chance of contracting cancer is a little more than 3 in 10, or 3E-01 (American Cancer Society 2003). The calculated incremental lifetime cancer risks (ILCRs) are compared to the range specified in the NCP of 10-6 to 10-4, or 1-in-1 million to 1-in-10,000 exposed persons developing cancer (USEPA 1990). Cancer risks below 10-6 are considered acceptable; cancer risks above 10-4 are considered unacceptable. The range between 10-6 and 10-4 is of concern, and any decisions to address risks further in this range, either through additional study or engineered control measures, should account for the uncertainty in the risk estimates. The Ohio EPA Division of Environmental Response and Revitalization

				(DERR) Remedial Response program has adopted a human health cumulative ILCR goal within this range of 1E-5 to be used as the level of acceptable excess cancer risk and for the development of remediation goals for a site. The DERR notes the defined risk goal should be applied as a goal, recognizing the need to retain flexibility during the evaluation and selection of remedial alternatives."
O-8.	Page 9-1 Lines 13-22 Anticipated Future Land Use (ALL RPTS)	The Anchor Test Area (ATA) Remedial Investigation and Feasibility Report are tied directly to the anticipated future land use of *dismounted National Guard training with digging*. Furthermore, the representative receptor at ATA is the National Guard Trainee. Since remediation is being performed to achieve CUGs protective of the Resident Farmer and the National Guard Trainee, all potential RVAAP receptors appear to be protected.	No changes required.	Comment noted.

A newer final version exists.	Please revise bullet to read "Final Facility-Wide Sampling and Analysis Plan for Environmental Investigations at the Ravenna Army Ammunition Plant,(USACE 2011).	Clarification. When referencing the FW SAP, it is in reference to sampling performed under the PBA08 Remedial Investigation. This effort was performed in February – April 2009 under the 2003 FW SAP. For explosives analysis, Test America, North Canton shipped the explosives to their West Sacramento, CA laboratory. Text revised as follows: Main text, Page 4-8, lines 21-23 revised as follows: "Samples collected during the PBA08 RI were analyzed by TestAmerica Laboratories, Inc. Please include "Facility-Wide Quality Assurance Project Plan for Environmental Investigations (USACE 2001)" in the Reference Section	Clarification. O-18.	Appx D, Chain of Custody Records (ALL RPTS)	Several of the Chains-of-Custody are missing "received by" signatures.	Please print from CD and provide signed copies of all Chains-of-Custody in Appendix D.	Agree. The fully signed versions of the COCs are within the laboratory data packages (Appx D: Laboratory Analytical Results CD). The COC versions provided in front of the CD were the versions held by the SAIC Field Manager. To rectify, the COC versions in front of the CD will be removed and only the fully signed COCs in the laboratory data packages will be in the report.
O-19.	Appx I, Page 1	Non Discounted Cost and Discounted Cost (4.125%) have the same reported total cost of $94,000. Why are these two values the same.	Please clarify and make the appropriate changes to the text.	Clarification. The discounted rate only affects the tasks that take multiple years to complete. Given the Capital Cost (i.e., excavation cost) is estimated for completion within the same year as completion, there will not be a cost change from the 4.125% discount. Please note that the discounted rate would result in different costs when O&M is required, as that is a task estimated to take 30 years. Since the Alternative 2 will not require O&M, there is no difference between the discounted cost and non-discounted cost. No text change recommended.

O-20.	Appx I, Page 1 and Page 5 (ALL RPTS)	These pages show remediation costs of $94,000 and $93,967, respectively. These two values should be the same.	Please clarify why these two values are different and make the appropriate changes to the text.	Agree. Page 1 of Appx I has been revised to use the exact number ($93,967), not the rounded number ($94,000). The main text will be reviewed to change the cost to the exact number.

		This statement is incorrect as there are AOCs/MRSs on Camp Ravenna property. Additionally the entire statement/comment is not applicable to the Goal listed. You must present the RAFLU as follow: **PLEASE CHECK THIS AND ENSURE IT IS THE CORRECT USAGE FOR THE ATA AOC.** Anchor Test Area - RAFLU Dismounted Training – Digging OHARNG Military Use and Training Land Use Representative Receptor = National Guard Trainee RVAAP is a controlled access facility that is fenced and patrolled by security personnel. **Anchor Test Area located in the *xxxxx* portion of RVAAP, is currently inactive. Full-time OHARNG, BRAC, and contractor staff work at the facility.** Military training and operations are conducted at the facility. The OHARNG projected future land-use for the AOC is Military Use and Training. The representative receptor is the National Guard Trainee and per the FWHHRAM this constitutes the Risk Assessment Land Use of Dismounted Training- Digging. National Guard training, in conjunction with the evaluation of agricultural-residential land uses and associated receptors, form the basis for identifying COCs. Residential land use, specifically the

The term "acceptable risk" is used in 2 locations in the RI/FS report, both times in reference to the SOR decision level of 1, which is from the FWCUG Report. A-6.	GLOBAL (ALL RPTS)	Please add references to the agreed upon and approved process for the unified approach for the ERAs in the PBA-2008.		Agree. Section 7.3.1 has been revised as follows: "The ERA presented in this RI/FS report follows a unified approach of methods integrating U.S. Army, Ohio EPA, and USEPA guidance. This ERA approach is consistent with the general approach by these agencies and primarily follows the Level I Scoping ERA, Level II Screening ERA, and Level III Baseline ERA outlined in the Guidance for Conducting Ecological Risk Assessments (Ohio EPA 2008), with specific application of components from the FWERWP, Risk Assessment Handbook Volume II: Environmental Evaluation (USACE 2010b), and Ecological Risk Assessment Guidance for Superfund: Process for Designing and Conducting Ecological Risk Assessments (USEPA 1997). The process implemented in this RI/FS report combines these guidance documents to meet requirements of the Ohio EPA and U.S. Army, while following previously accepted methods established for RVAAP. This unified approach resulted from

A-11.	Section 7 (ALL RPTS)	It is important that we are consistent in our approach. It seems that the ATA is using the TR of 1.0 X 10-5 for COPCs which is not correct. If this is what was completed herein and in all documents, then it needs to be corrected. The process is as follows: 1.) SRCs are detected (pass freq. detection screen, etc.) 2.) EPCs of the SRCs are screened to FWCUGs at TR of 1.0 X 10-6 and HQ = 0.1 3.) COPCs are screened against FWCUG TR to determine COC using the 1.0 X 10-5 TR.	Revise document to follow process and correct all tables. I may have missed this in the Building 1200 RI, but I think it is just the way it is presented. For example, when you read the Title of Table 7-6, it seems you are determining the COPCs using TR of 1. X 10-5 and HQ = 1.	Clarification and agree. After review of the document (and subsequent documents), we verified the process and it is as stated in the comment. The SRCs are detected and undergo comparison of maximum detected concentrations (MDCs) to background, identification of essential nutrients, and frequency of detection screen. The screening criteria for identification of COPCs is and includes comparison of MDCs to FWCUGs at a target cancer risk level of 1E-06 and non-carcinogenic target HQ of 0.1. The criteria used for identifying COCs includes a comparison of exposure point concentrations (EPCs) to FWCUGs corresponding to a target risk of 1E-05 and target HQ of 1.0. To further clarify, the following changes have been made. Page 7-5, lines 15-17 have been revised below. "Most of the agreed-to risk assessment methods have been documented in the FWHHRAM and follow standard USEPA-approved risk assessment guidance. This includes the Process to Identify RVAAP Chemicals of Potential Concern (presented in Figure 5-1), the use of TR of 1E-06 and HQ of 0.1 to identify COPCs, and TR of 1E-05 and HQ of 1.0 to identify COCs." With respect to Table 7-6 (and all equivalent table), the intention is to compare previously identified COPCs to FWCUGs Corresponding to a HQ of 1.0 and TR of 1E-05, not to identify COPCs. To rectify, Table 7-6 (and all equivalent tables) will have the title revised as follows: "Table 7-6. FWCUGs Corresponding to an HQ of 1.0 and Target Risk of 1E-05 ~~for COPCs~~ in Soil"
