AMMUNITION ACTIVITIES -- 1945 - 1951

During the period between cessation of contractor production of ammunition at termination of World War II, and the beginning of another contractor's ammunition operation at the time of the Korean Conflict, the Arsenal was operated by the Ordnance Corps.

During this six year period, from 1945 and 1951, major work was performed on the demilitarization, renovation, modification and normal maintenance of ammunition and components returned from overseas, camps, stations and depots. Work was performed on 158 projects.

The following table shows the tons of scrap metal that were generated from this work and sold to industry during the year 1946 alone. The succeeding years also generated similar quantities of scrap metals.

<u>Scrap Metal Tons 1946</u>	
Debanded 4.5" Shell	2340
Disassembled 75MM Shell	3846
Debanded 240MM Shell	311
Burned Land Mines	272
Debanded 76MM and 3" Shell	3616
Burned Napalm Bombs	1600
Demiled 105MM Shell	<u>110</u>
	12095

Major normal maintenance during this period was performed on 1,500,000 rounds of 155MM and 8" loaded shell.

The quantity of TNT explosive recovered from various projects, or depots amounted to 5,000,000 pounds being disposed of thru Ordnance Ammunition Command.

In 1948 two major renovation projects were started, resulting in the return to serviceable condition of 750,000 rounds of 90MM ammunition and 570,000 rounds of 105MM ammunition.

AMMUNITION ACTIVITIES -- 1945 - 1951

The following table shows the results of major activities during the between wars period of 1945 to 1951.

TONS OF AMMUNITION PROCESSED -- November 1945 - June 1951

	<u>1945</u>		<u>1948</u>	<u>1949</u>	<u>1950</u>	<u>To July</u> <u>1951</u>
	<u>1946</u>	<u>1947</u>				
Demilitarization	12,096	678	1,822	2,610	1,732	1,250
* Normal Maintenance	-	55,620	48,552	21,994	30,843	11,632
Modification	-	-	8,049	16,720	9,162	6,249
Renovation	-	-	210	1,332	13,081	6,298

In October 1950, the following items appeared on the production schedule as initial new loading of ammunition projects:

Item 720 for 120MM Shell,  
Item 774 for 8" Shell,  
Item 1216 for 120MM Propellent Charges, and  
Item 1381 for MK2A4 Primers.

These were soon followed by other projects to be performed by an operating contractor.

\* Repack & inspect, warehousing.
